Augmented Giulio Toscani, 2025-05-01 In a world where artificial intelligence is reshaping industries, how can we ensure that AI enhances human skills rather than replacing them? This book offers readers an accessible and insightful guide to the positive potential of AI for human augmentation. Drawing from consultations with 150 AI experts from across 50 countries, *Augmented* introduces the concept of *prAIority*, which connects three essential pillars: data, AI systems, and human judgment. It examines how data fuels innovation, the intricacies of designing and refining AI systems, and the critical role of human expertise in harnessing AI's strengths. Intellectual Property and Clean Energy Matthew Rimmer, 2018-10-26 This collection considers the future of climate innovation after the Paris Agreement. It analyses the debate over intellectual property and climate change in a range of forums, including the climate talks, the World Trade Organization, and the World Intellectual Property Organization, as well as multilateral institutions dealing with food, health, and biodiversity. The book investigates the critical role patent law plays in providing incentives for renewable energy and access to critical inventions for the greater public good, as well as plant breeders' rights and their impact upon food security and climate change. Also considered is how access to genetic resources raises questions about biodiversity and climate change. This collection also explores the significant impact of trademark law in terms of green trademarks, eco-labels, and greenwashing.
