Design and Implementation of Transformer : Based AI Technologies for Automatically Extracting Wonderful Clips from Sporting Videos Hsin-Hua Lee, 2023. Baseball has been deeply rooted in Taiwan for more than a hundred years. It has always been the most popular sports event for the Taiwanese. It is not only the most iconic sport but also unites the consensus of the Taiwanese community. In recent years, people can easily access all kinds of sports because of the Internet community media popularization. The supporters tend to watch these wonderful clips repeatedly on the multimedia platform, which leads to business opportunities due to advertisement. Baseball games often last for several hours. However, during these hours, the time for athletes to show their wonderful skills is in short duration. In the past, extracting wonderful clips usually highly relies on the experience of experts, consuming a lot of time and labor costs to extract highlights such as strikeouts, catches, home runs, etc. With the advancement and development of science and technology, the advancement of artificial intelligence and deep learning technology, especially the advancement of Transformer in processing pictures, videos, and natural language, is progressing rapidly. This thesis intends to use the Self Attention in Transformer to perform parallel processing operations on a baseball game video, which can be used in natural language to understand the relevance of the context. Moreover, it has been proven in recent years that it is also capable of extracting images from the features of pictures. It has similar convolutional computing capabilities and can extract the

features of pictures in spatial dimensions Therefore this thesis also intends to conduct feature extraction and identification for the player s behavior and automatically extract clips for the predefined features to develop a smart video editing system Most behavior recognitions were based on visual feature image processing or deep learning CNN or RNN convolution and pooling scanning for behavior classification or behavior prediction However different from these studies this thesis mainly utilizes the Transformer Self Attention mechanism to learn the context and extract the feature information from the entire domain in the image and obtain the start and end points of its highlights through the BERT QA model Compared with the traditional behavior recognition method it is more novel and innovative It is expected to have the significant impact and contribution to sports related industries and academic development [Descript AI - AI-Assisted Podcast & Video Editing](#)

An Intelligent Video Editing Automate Framework Using AI and Computer Vision Haolin Xie, Yu Sun, 2022

At present, many video editing software have been created, but what they all have in common is that they require manual work to edit. And it takes a lot of time and the user needs to watch each frame before editing. In this paper, we have developed a program about AI intelligence. The most important point of this software is that it can automatically focus the face of a person and edit only selected clips of the person to make a complete video. Users only need to prepare the video they want to edit and a photo of the main character. Then upload both to the software and AI Intelligence will automatically edit it, providing the user with a way to download and save it after editing the

main character they need we applied our application to an example video using the Marvel character Hawkeye as he appears in End Game and tried many experiments with the clip eventually we tried many experiments with the clip and finally got a video of our selected character The results show that this software saves the user a lot of time and is highly efficient All operations are carried out by AI
