Evolutionary Computation with Biogeography-based Optimization Haiping Ma,Dan

Simon,2017-01-19 Evolutionary computation algorithms are employed to minimize functions with large number of variables Biogeography based optimization BBO is an optimization algorithm that is based on the science of biogeography which researches the migration patterns of species These migration paradigms provide the main logic behind BBO Due to the cross disciplinary nature of the optimization problems there is a need to develop multiple approaches to tackle them and to study the theoretical reasoning behind their performance This book explains the mathematical model of BBO algorithm and its variants created to cope with continuous domain problems with and without constraints and combinatorial problems

Oppositional Biogeography-based Optimization Mehmet Ergezer,OhioLINK Electronic Theses and Dissertations Center,2014 Abstract This dissertation outlines a novel variation of biogeography based optimization BBO which is an evolutionary algorithm EA developed for global optimization The new algorithm employs opposition based learning OBL alongside BBO migration to create oppositional BBO OB BO Additionally a new opposition method named quasi reflection is introduced Quasireflection is based on opposite numbers theory and we mathematically prove that it has the highest expected probability of being closer to the problem solution among all OBL methods that we explore Performance of quasi opposition is validated by mathematical analysis for a single dimensional problem and by simulations for higher dimensions Experiments are performed on benchmark problems taken from the literature as well as real world optimization problems

provided by the European Space Agency Empirical results demonstrate that with the assistance of quasi reflection BBO significantly outperforms BBO in terms of success rate and the number of fitness function evaluations required to find an optimal solution for a set of standard continuous domain benchmarks The oppositional algorithm is further revised by the addition of fitness dependent quasi reflection which gives a candidate solution that we call xKr In this algorithm the amount of reflection is based on the fitness of the individual and can be non uniform We find that for small reflection weights xKr has a higher probability of being closer to the solution but only by a negligible amount As the reflection weight increases xKr gets closer on average to the solution of an optimization problem as the probability of being closer decreases In addition we extend the idea of opposition to combinatorial problems We introduce two different methods of opposition to solve two types of combinatorial optimization problems The first technique open path opposition is suited for combinatorial problems where the final node in the graph does not have to be connected to the first node such as the graph coloring problem The latter technique circular opposition can be employed for problems where the endpoints of a graph are linked such as the well known traveling salesman problem TSP Both discrete opposition methods have been hybridized with biogeography based optimization BBO Simulations on standard graph coloring and TSP benchmarks illustrate that incorporating opposition into BBO improves performance

Biogeography-Based Optimization: Algorithms and Applications Yujun Zheng,Xueqin Lu,Minxia Zhang,Shengyong Chen,2018-09-14 This book introduces readers to the background general framework main operators and other basic characteristics of biogeography based optimization BBO which is an emerging branch of bio inspired computation In particular the book presents the authors recent work on improved variants of BBO hybridization of BBO with other algorithms and the application of BBO to a variety of domains including transportation image processing and neural network learning The content will help to advance research into and application of not only BBO but also the whole field of bio inspired computation The algorithms and applications are organized in a step by step manner and clearly described with the help of pseudo codes and flowcharts The readers will learn not only the basic concepts of BBO but also how to apply and adapt the algorithms to the engineering optimization problems they actually encounter

Biogeography-based Optimization for Combinatorial Problems and Complex Systems Dawei Du,Cleveland State University. Department of Electrical and Computer Engineering,OhioLINK Electronic Theses and Dissertations Center,2014 Abstract Biogeography based optimization BBO is a heuristic evolutionary algorithm that has shown good performance on many problems In this dissertation three problems are researched for BBO convergence speed and optimal solution convergence of BBO 1 BBO application to combinatorial problems and BBO application to complex systems The first problem is to analyze BBO from two perspectives how the components of BBO affect its convergence speed and the reason that BBO converges to the optimal solution For the first perspective which is convergence speed we analyze the two essential components of BBO population construction and information sharing For the second perspective a mathematical BBO model

is built to theoretically prove why BBO is capable of reaching the global optimum for any problem. In the second problem addressed by the dissertation BBO is applied to combinatorial problems. Our research includes the study of migration, local search, population initialization and greedy methods for combinatorial problems. We conduct a series of simulations based on four benchmarks, the sizes of which vary from small to extra large. The simulation results indicate that when combined with other techniques the performance of BBO can be significantly improved. Also a BBO graphical user interface (GUI) is created for combinatorial problems, which is an intuitive way to experiment with BBO algorithms including hybrid BBO algorithms. The third and final problem addressed in this dissertation is the optimization of complex systems. We invent a new algorithm for complex system optimization based on BBO, which is called BBO complex. Four real world problems are used to test BBO Complex and compare with other complex system optimization algorithms and we obtain encouraging results from BBO Complex. Then a Markov model is created for BBO Complex. Simulation results are provided to confirm the model.

Biogeography-based Optimization Dawei Du, 2009. Biogeography based optimization BBO is a recently developed heuristic algorithm which has shown impressive performance on many well known benchmarks. The aim of this thesis is to modify BBO in different ways. First in order to improve BBO this thesis incorporates distinctive techniques from other successful heuristic algorithms into BBO. The techniques from evolutionary strategy (ES) are used for BBO modification. Second the traveling salesman problem (TSP) is a widely used benchmark in heuristic algorithms and it is considered as a standard benchmark in heuristic computations. Therefore the main task in this part of the thesis is to modify BBO to solve the TSP then to make a comparison with genetic algorithms (GAs). Third most heuristic algorithms are designed for noiseless environments. Therefore BBO is modified to operate in a noisy environment with the aid of a Kalman filter. This involves probability calculations therefore BBO can choose the best option in its immigration step.

Evolutionary Optimization Ruhul Sarker,Masoud Mohammadian,Xin Yao,2002-01-31 The use of evolutionary computation techniques has grown considerably over the past several years Over this time the use and applications of these techniques have been further enhanced resulting in a set of computational intelligence also known as modern heuristics tools that are particularly adept for solving complex optimization problems Moreover they are characteristically more robust than traditional methods based on formal logics or mathematical programming for many real world OR MS problems Hence evolutionary computation techniques have dealt with complex optimization problems better than traditional optimization techniques although they can be applied to easy and simple problems where conventional techniques work well Clearly there is a need for a volume that both reviews state of the art evolutionary computation techniques and surveys the most recent developments in their use for solving complex OR MS problems This volume on Evolutionary Optimization seeks to fill this need Evolutionary Optimization is a volume of invited papers written by leading researchers in the field All papers were peer reviewed by at least two recognized reviewers The book covers the foundation

as well as the practical side of evolutionary optimization [Evolutionary Computation Techniques: A Comparative Perspective](#) Erik Cuevas, Valentín Osuna, Diego Oliva, 2016-12-28 This book compares the performance of various evolutionary computation EC techniques when they are faced with complex optimization problems extracted from different engineering domains. Particularly focusing on recently developed algorithms it is designed so that each chapter can be read independently. Several comparisons among EC techniques have been reported in the literature however they all suffer from one limitation their conclusions are based on the performance of popular evolutionary approaches over a set of synthetic functions with exact solutions and well known behaviors without considering the application context or including recent developments. In each chapter a complex engineering optimization problem is posed and then a particular EC technique is presented as the best choice according to its search characteristics. Lastly a set of experiments is conducted in order to compare its performance to other popular EC methods

[Knowledge Incorporation in Evolutionary Computation](#) Yaochu Jin, 2004-10-20

Incorporation of a priori knowledge such as expert knowledge meta heuristics and human preferences as well as domain knowledge acquired during evolutionary search into evolutionary algorithms has received increasing interest in the recent years. It has been shown from various motivations that knowledge incorporation into evolutionary search is able to significantly improve search efficiency. However results on knowledge incorporation in evolutionary computation have been scattered in a wide range of research areas and a systematic handling of this important topic in evolutionary computation still lacks. This edited book is a first attempt to put together the state of art and recent advances on knowledge incorporation in evolutionary computation within a unified framework. Existing methods for knowledge incorporation are divided into the following five categories according to the functionality of the incorporated knowledge in the evolutionary algorithms 1 Knowledge incorporation in representation population initialization combination and mutation 2 Knowledge incorporation in selection and reproduction 3 Knowledge incorporation in fitness evaluations 4 Knowledge incorporation through life time learning and human computer interactions 5 Incorporation of human preferences in multi objective evolutionary computation. The intended readers of this book are graduate students researchers and practitioners in all fields of science and engineering who are interested in evolutionary computation. The book is divided into six parts. Part I contains one introductory chapter titled A selected introduction to evolutionary computation by Yao which presents a concise but insightful introduction to evolutionary computation
