**Advances in Object-Oriented Information Systems** Jean-Michel Bruel, Zohra Bellahsene, 2003-08-02 For the first time four workshops have been held in conjunction with the 8th Object Oriented Information Systems conference OOIS 2002 to encourage interaction between researchers and practitioners. Workshop topics are of course inline with the conference's scientific scope and provide a forum for groups of researchers and practitioners to meet together more closely and to exchange opinions and advanced ideas and to share preliminary results on focused issues in an atmosphere that fosters interaction and problem solving. The conference hosted four one day workshops. The four selected workshops were fully in the spirit of a workshop session hosted by a main conference. Indeed OOIS deals with all the topics related to the use of object oriented techniques for the development of information systems. The four workshops are very specific and contribute to enlarging the spectrum of the more general topics treated in the main conference. The first workshop focused on a very specific and key concept of object oriented development: the specialization/generalization hierarchy. The second one explored the use of non traditional approaches at the edge of object oriented techniques such as aspects, AI etc to improve reuse. The third workshop dealt with optimization in Web based information systems. And finally the fourth workshop investigated issues related to model driven software development.

**Object-Oriented Information Systems** Zohra Bellahsene, Dilip Patel, Colette Rolland, 2003-08-02 This book constitutes the refereed proceedings of the 8th International Conference on Object Oriented Information Systems (OOIS 2002) held in Montpellier, France, in September 2002. The 34 revised full papers and 17 short papers presented were carefully reviewed and selected from 116 submissions. The papers are organized in topical sections on developing web services, object databases, XML and web component, and ontology, UML modeling, object modeling, and information systems adaptation, e-business models and workflow, performance and method evaluation, programming and tests, software engineering metrics, web based information systems, architecture and Corba, and roles and evolvable objects.

**Object-Oriented Information Systems** David A. Taylor, 1992-03-30 A clear, precise presentation of object oriented concepts for MIS managers/executives who are instrumental in the decision to adopt an object oriented technology which will remain a leading design and programming application for many years to come. Includes such features as fast track which summarizes the context in the left hand margin plus an appendix of key concepts that pulls together essential ideas.

**Object-Oriented Information Systems** Dimitri Konstantas, 2003-08-27 This book constitutes the refereed proceedings of the 9th International Conference on Object Oriented Information Systems (OOIS 2003) held in Geneva, Switzerland, in September 2003. The 29 revised full papers and 11 revised short papers presented together with an invited paper and abstracts of 2 invited talks were carefully reviewed and selected from 80 submissions. The papers are organized in topical sections on evolution of OOIS, OOIS frameworks, patterns and components, object oriented databases, XML on Web, aspects evolution, object oriented design and architecture, and modeling of information systems.

**OOIS'96** Dilipkumar Patel, Yuan

Sun, Shushmaben Patel, 2012-12-06 This volume contains the papers presented at the Third International Conference on Object Oriented Information Systems OOIS 96 which was held at South Bank University London. The keynote addresses by Professor Colette Roland and Mr Ian Graham are also included. The acceptance rate for papers was around 47%. The papers for the Industry Day were invited papers. The keynote paper by Professor Roland analyses the challenges in object modelling particularly the impact of requirements engineering for conceptual modelling. She suggests innovative research perspectives to enhance and extend object oriented approaches in order to deal with the emerging area of requirements engineering. The keynote paper presented by Mr Graham focuses on the problems and solutions for adopting use cases. In his paper Graham illustrates the theoretical issues and practical problems of use cases and highlights them using examples. The papers included in this volume cover different aspects of object modelling object oriented software development object databases and interoperability. In the modelling session Ram et al outline an extended object model to tackle the problems of capturing complex requirements of office information systems. Simons paper concentrates on core object modelling concepts and presents a mathematical theory of class OOIS'94.

Dilip Patel, Yuan Sun, Shushma Patel, 2012-12-06 This volume contains the papers presented at the International Conference on Object Oriented Information Systems OOIS 94 held at South Bank University London December 19-21 1994. In response to our call for papers a total 85 papers from 24 different countries were submitted. Each paper was evaluated by at least two Program Committee members and an additional reviewer. Together we selected 41 papers for presentation at the conference and inclusion in the Proceedings. Also included are the keynote addresses by Peter Gray and Michael Jackson. The other submissions were recommended for presentation in the poster sessions. Peter Gray our invited speaker evaluates the problems of object oriented systems and data independence by looking at how object oriented database applications are failing to perceive its benefits and instead rely too much on encapsulation. He suggests alternative kinds of object storage to preserve data independence. The second invited speaker Michael Jackson describes a way of solving problems by focusing directly on the problems themselves their components and structures and on the relationships between the problem and the solution method. He discusses a particular view of the role of object orientation in software development.

*Object-Oriented Information Systems* Sameh Shamoon, 2014-11-27 An information system IS is a system composed of people and computers that processes or interprets information. The term is also sometimes used in more restricted senses to refer to only the software used to run a computerized database or to refer to only a computer system. The plural term information systems construed as singular is also used for the actual academic study of the field in other words for the study of complementary networks of hardware and software that people and organizations use to collect, filter, process, create and distribute data. Any specific information system aims to support operations management and decision making. In a broad sense the term is used to refer not only to the information and communication technology ICT that an organization uses but also to the way in which people interact with this technology in support of business processes.

Some authors make a clear distinction between information systems computer systems and business processes. Information systems typically include an ICT component but are not purely concerned with ICT focusing instead on the end use of information technology. Information systems are also different from business processes. Information systems help to control the performance of business processes. Alter argues for advantages of viewing an information system as a special type of work system. A work system is a system in which humans and or machines perform work processes and activities using resources to produce specific products and or services for customers. An information system is a work system whose activities are devoted to processing, capturing, transmitting, storing, retrieving, manipulating and displaying information. As such, information systems interrelate with data systems on the one hand and activity systems on the other. An information system is a form of communication system in which data represent and are processed as a form of social memory. An information system can also be considered a semi formal language which supports human decision making and action. Information systems are the primary focus of study for organizational informatics.

*Object-Oriented Information Systems* Dimitri Konstantas, Michel Leonard, Yves Pigneur, Shusma Patel, 2003-09-09. The conference on Object Oriented Information Systems (OOIS) is now an established international conference where innovative ideas, research, applications and experiences in the design, development and use of object oriented information systems from both the academic and industrial environments are represented. The ninth OOIS conference was held at the University of Geneva September 25, 2003. The main theme was the Evolution of Object Oriented Information Systems. The papers presented ideas and issues related to the evolution, adaptability, restructuring and extensibility of OOIS. In the context of the conference, five workshops and four tutorials were organized, providing a discussion forum for new ideas and including in-depth presentations on important hot subjects. The three invited speakers of the ninth OOIS conference provided an alternative view on OOIS and their evolution. Prof. John Mylopoulos (University of Toronto) and VLDB president gave the opening presentation entitled Agent Oriented IS Development. Dr. Richard Soley (OMG President and CEO) gave the closing presentation entitled Model Driven Architecture. The Evolution of Object Oriented Systems and Prof. Lina Al Jadir (American University of Beirut) gave the theme presentation entitled Once Upon a Time a DTD Evolved into Another DTD.

**Object-oriented Systems Analysis and Design** Ronald J. Norman, 1996. Evolutionary in approach, this book explores information systems development both analysis and design using an object oriented methodology combined with a relational database as part of the implementation.

**OOIS 2001** Xingxu Wang, Shusma Patel, Ronald Johnston, 2012-12-06. Welcome to OOIS 01 and Calgary. This is the 7th International Conference on Object Oriented Information Systems (OOIS) that focus on Object Oriented and Web Based Frameworks for Information Systems. In the last few years we've seen significant new development in this field from one off design technologies to reusable frameworks and from web applications to bioinformatic systems. We perceive that information processing is one of the most important activities of human beings. Object orientation and frameworks have been the main stream technologies for design.

and implementation of large scale and complex information systems Recent research advances and industrial innovations in information systems modeling and Internet applications have explored the new trends in shifting information system vendors from component and system developers to services providers Users of information systems are increasingly demanding higher performance mobility and personalization in order to realize the dream to access and obtain necessary information anywhere and anytime The new development requires the investigation of new architectures frameworks processes and inter connectivity of information systems at society organization team and personal levels The OOLS 01 Proceedings has put together a program of 53 papers from leading researchers and practitioners in the field of object technology and information systems Object-Oriented Methodologies and Systems Elisa Bertino, Susan Urban, 1994-09-07 This volume presents the proceedings of the International Symposium on Object Oriented Methodologies and Systems ISOOMS 94 held in Palermo Italy in September 1994 in conjunction with the AICA 1994 Italian Computer Conference The 25 full papers included cover not only technical areas of object orientation such as databases programming languages and methodological aspects but also application areas The book is organized in chapters on object oriented databases object oriented analysis behavior modeling object oriented programming languages object oriented information systems and object oriented systems development

**OOIS'98** Colette Rolland,Georges Grosz,2012-12-06 The Sorbonne University is very proud to host this year the oms Conference on Object Oriented Information Systems There is a growing awareness of the importance of object oriented techniques methods and tools to support information systems engineering The term information systems implies that the computer based systems are designed to provide adequate and timely information to human users in organizations The term engineering implies the

application of a rigorous set of problem solving approaches analogous to those found in traditional engineering disciplines. The intent of this conference is to present a selected number of those approaches which favor an object oriented view of systems engineering. OMS 98 is the fifth edition of a series of conferences. Starting in 1994 in London this series evolved from a British audience to a truly European one. The goal is to build a world wide acknowledged forum dedicated to object oriented information systems engineering. This conference is organized with the aim to bring together researchers and practitioners in Information Systems, Databases and Software Engineering who have interests in object oriented information systems. The objective is to advance understanding about how the object technology can empower information systems in organizations on techniques for designing effective and efficient information systems and methods and development tools for information systems engineering. The conference aims also at discussing the lessons learned from large scale projects using objects. The call for OMS was given to an international audience.

### **Advances in Object-oriented Information Systems (OOIS) 2002**

Workshops on Advances in Object-Oriented Information Systems, 2002. Systems for Sustainability Frank A. Stowell, Ray L. Ison, Rosalind Armson, Jacky Holloway, Sue Jackson, Steve McRobb, 2013-11-11. The term sustainability has entered the lexicon of many academic disciplines and fields of professional practice but to date does not appear to have been seriously considered within the systems community unless perhaps under other guises. Within the wider community there is no consensus around what sustainability means with some authors identifying 70 to 100 definitions of the term. Some see sustainability as the precise and quantifiable outcomes of biological systems whilst others see it in terms of processes relevant to personal and organizational change with the potential to effect changes in our relationships with our environments. Internationally it has been increasingly used in relation to the term sustainable development a term popularised by the Brundtland Commission's report in 1987 entitled *Our Common Future*. Despite this diversity and polarised perception on its utility unlike many other popular terms it has not had its time and subsided quietly from our language. It is therefore timely for the systems community to explore the relationship between systems and sustainability in a range of contexts. Participants in this the 5th International Conference of the United Kingdom Systems Society (UKSS) have been invited to reflect critically on the contribution of systems thinking and action to sustainability to the sustainability of personal relationships, the organizations in which we live and work and our natural environment.
