Active Origami Edwin A. Peraza Hernandez,Darren J.

Hartl,Dimitris C. Lagoudas,2018-07-12 Origami structures have the ability to be easily fabricated from planar forms enable the deployment of large structures from small volumes and are potentially reconfigurable These characteristics have led to an increased interest in theoretical and computational origami among engineers from across the world In this book the principles of origami active materials and solid mechanics are combined to present a full theory for origami structures The focus is on origami structures morphed via active material actuation and formed from sheets of finite thickness The detailed theoretical derivations and examples make this an ideal book for engineers and advanced students who aim to use origami principles to develop new applications in their field

Spatio-Temporal Learning and Monitoring for Complex Dynamic

Processes with Irregular Data Chunhui Zhao,Wanke Yu,2025-07-01 Spatio Temporal Learning Using Irregular Data for Complex Dynamic Processes introduces learning modeling and monitoring methods for highly complex dynamic processes with irregular data Two classes of robust modeling methods are highlighted including low rank characteristic of matrices and heavy tailed characteristic of distributions In this class the missing data ambient noise and outlier problems are solved using low rank matrix complement for monitoring model development Secondly the Laplace distribution is explored which is adopted to measure the process uncertainty to develop robust monitoring models The book not only discusses the complex models but also their real world applications in industry Shows how to analyze in great detail the industrial operational status through spatio temporal representation learning Covers how to establish robust monitoring models for industrial processes with irregular data Indicates how to adaptively update models in order to reduce frequent false alarms for dynamic processes Explains how to take the temporal correlation into consideration to develop an adaptive monitoring model for satisfying the dynamic behaviours of industrial processes
