## Common Linux problems

Condition	Suggested solutions
The machine does not print.	<ul style="list-style-type: none"><li>• Check if the printer driver is installed in your system. Open Unified Driver Configurator and switch to the <b>Printers</b> tab in the <b>Printers configuration</b> window to look at the list of available machines. Make sure that your machine is displayed on the list. If not, open <b>Add new printer wizard</b> to set up your device.</li><li>• Check if the machine is started. Open <b>Printers configuration</b> and select your machine from the printers list. Look at the description in the <b>Selected printer</b> pane. If its status contains <b>Stopped</b>, press the <b>Start</b> button. Normal operation of the machine should be restored. The "stopped" status might be activated when some problems in printing occur.</li><li>• Check if your application has special print options such as "-oraw". If "-oraw" is specified in the command line parameter, then remove it to print properly. For Gimp front-end, select "print" -&gt; "Setup printer" and edit the command line parameter in the command item.</li></ul>
The machine does not print whole pages, and output is printed on half the page.	It is a known problem that occurs when a color machine is used on version 8.51 or earlier of Ghostscript, 64-bit Linux OS, and has been reported to <a href="http://bugs.ghostscript.com">bugs.ghostscript.com</a> as Ghostscript Bug 688252. The problem is solved in AFPL Ghostscript v. 8.52 or above. Download the latest version of AFPL Ghostscript from <a href="http://sourceforge.net/projects/ghostscript/">http://sourceforge.net/projects/ghostscript/</a> and install it to solve this problem.
"Cannot open port device file" error message appears when printing a document.	Avoid changing print job parameters (e.g., via LPR GUI) while a print job is in progress. Known versions of CUPS server break the print job whenever print options are changed and then try to restart the job from the beginning. Since Unified Linux Driver locks the port while printing, the abrupt termination of the driver keeps the port locked and unavailable for subsequent print jobs. If this situation occurs, try to release the port by selecting <b>Release port</b> in the <b>Port configuration</b> window.

Refer to the Linux User's Guide that came with your computer for further information on Linux error messages.
