**Scope**

This document describes interconnections necessary to operate multiple generator sets with PowerCommand 3200 digital paralleling controls in conjunction with switchgear and control systems manufactured by others.

These recommendations demonstrate the most reliable and effective means for providing the required interface. However, the system designer may opt to modify these arrangements for various reasons. In the event that occurs, we cannot be responsible for proper system operation or nuisance system failures and may not warrant generator set failures.

These recommendations cover use of the control in line voltage applications. (600 VAC and lower.) They assume that the generator set is equipped with the appropriate paralleling option (or an upgrade kit to add that feature).
