Novel Translational Advances in Hemodynamics for the Diagnosis and Treatment of

Cardiovascular Diseases Gaoyang Li,Aike Qiao,Hitomi Anzai ,Xuelan Zhang,2024-11-12 Currently hemodynamically guided diagnosis and treatment of cardiovascular diseases has vastly improved morbidity and mortality However many challenges remain such as the increasing complexity of patients conditions the uneven level of overall treatment the heavy task of medical and nursing staff in treating patients and the accelerated updating and iteration of new technologies in the discipline In clinic settings obtaining direct clinical access of hemodynamic parameters remains challenging mainly due to the potential risks of invasive measurements and expensive medical costs Numerous experimental and simulation methods have been developed to address this deficiency to achieve noninvasive detection of hemodynamics Two commonly utilized techniques are the representative particle image velocimetry PIV and computational fluid dynamics CFD

Practical Handbook of OCT Bruno Lumbroso,Marco Rispoli,2014-11-30 Optical coherence tomography OCT is a non invasive imaging test that uses light waves to take cross section pictures of the retina the light sensitive tissue lining the back of the eye eyeSmart This new edition has been fully updated to provide clinicians and trainees with the most recent advances in OCT imaging Beginning with an introduction to the technique for obtaining clear images and discussion on normal anatomy the following sections offer step by step guidance on the interpretation of OCT images and data acquired by OCT en face OCT and OCT angiography Each chapter has been revised and new examination and diagnostic protocols are covered in depth The second edition includes two new chapters on OCT Dyeless Angiography and OCT Analysis and

Interpretation of Common Disorders Highly illustrated with more than 400 clinical images and tables this practical reference has been written by renowned experts Bruno Lumbroso and Marco Rispoli from Centro Oftalmologico Mediterraneo in Rome Key points Fully revised new edition providing latest advances in interpretation of OCT imaging Includes two new chapters and more than 400 clinical images and tables Authored by renowned ophthalmologists Bruno Lumbroso and Marco Rispoli Previous edition published in 2012 **Aerospace Engineering** ,2004 **Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic Awards** ,2005 Algorithmic Techniques for Manual-scanning and Multi-sensory Representation of Optical Coherence Tomography Data Adeel Ahmad,2010 Optical coherence tomography OCT is an emerging biomedical imaging modality that interferometrically measures the depth resolved back scattered light from a sample The high resolution subsurface imaging capabilities of OCT can potentially provide valuable diagnostic feedback about tissue morphology during intra operative applications of OCT However the intra operative use of OCT is hindered by the lack of suitable sample scanning mechanisms and the difficulty in real time interpretation of OCT data Screening or diagnostic procedures typically require high resolution imaging over a large field of view The current scanning mechanisms which are predominantly based on mechanically scanning the OCT beam over the specimen have a limited scan range and lack the required flexibility for large field of view imaging Moreover OCT being a high resolution imaging modality requires a very high data acquisition rate and would generate huge amounts of data if used to image over a large surgical field These extremely high data rates would make the real time interpretation of OCT data a challenge especially in the highly demanding operating room environment where the surgeon has to simultaneously keep track of a number of parameters In this thesis algorithmic techniques are proposed that may be helpful in overcoming some of these limitations Image acquisition over a large field of view with flexible scan geometry would require a manually scanned hand held probe This thesis describes a cross correlation based image acquisition technique that may be used for image formation by compensating for the variable scan velocity encountered while manually scanning the probe This thesis also describes an approach for multi sensory representation of OCT data by converting OCT data and images into sound Audio rendering of OCT data when used in conjunction with the visual display may facilitate rapid interpretation of OCT data as the human auditory sense can detect more rapid transitions in the data than the visual sense and hence may be used for identifying suspected regions in real time which can subsequently be monitored in high resolution using the visual display
