Distributed Training and Rural Health Professions Education Roger Peter Strasser,Julian

Wright,Mohamed Elhassan Abdalla ,Julia Blitz,Jana Vera Muller ,Lachlan Van Schaik,2026-01-12 Distributed health professions education also referred to as decentralized training in the medical education literature is rapidly being adopted by academic institutions where clinical training occurs at sites outside of the tertiary academic hospitals Often distributed education enhances exposure to social determinants of health accommodates an increasing number of students encourages the social accountability of students and provides opportunity for work integrated learning and service learning opportunities Socially accountable distributed learning often involves community engagement based on interdependent partnerships

Psychosis, Psychiatry and Psychospiritual Considerations Brian Spittles,2022-11-29 A phenomenological and spiritual investigation of anomalous mental experiences From a psychiatric perspective psychosis is generally viewed as a psychopathological and often incomprehensible mental disorder of biological cause In his book Brian Spittles argues that this represents a rather limited view and that a psychospiritual investigation of psychosis may enable a better understanding of its nature and determinants His aim is not to negate the discipline of psychiatry but to demonstrate the viability and efficacy of incorporating psychospiritual considerations into psychosis research Within these pages Spittles challenges several core psychiatric beliefs and calls for the discipline to extend its investigative parameters beyond the limited epistemological bounds of materialism The book uses an open ended heuristic approach that enables the systematic examination and critical appraisal of views on psychosis across the materialist to metaphysical spectrum This is structured in four Focal Settings that sequentially examine the construal of psychosis within different paradigms of psychospiritual understanding which provide a historical overview of evolving understandings of psychosis within the tradition of psychiatry in which psychospiritual matters are generally not considered **Geriatric Medicine** Michael R. Wasserman,Debra Bakerjian,Sunny Linnebur,Sharon Brangman,Matteo Cesari,Sonja Rosen,2024-02-19 Both volumes sold as a combined set for a one time purchase Older adults represent the most rapidly growing demographic

in the US and in many developed countries around the world. The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature. Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US. How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance. According to the Institute of Medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine. Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life. It is essential that physicians, nurse practitioners, physician assistants, pharmacists, social workers and other health care professionals all be knowledgeable about the geriatric approach to care. Geriatric medicine varies from most other fields in medicine. While many specialties function on the basis of evidence based literature, geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants. Geriatricians are used to caring for 90 year olds with multiple chronic illnesses. Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care. Practicing geriatric medicine requires the ability to see patterns. But it goes one step further as the rules are constantly in flux. Every patient is an individual with particular needs and goals. In order to provide true person centered care to older adults, one has to incorporate these factors into the decision making process. The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience. Basic science and the physiology of aging create a background but are not the main focus. This is because every chapter has been written through the lens of person centered care. This book is about focusing on what matters to the person and how that is not always about pathology and physiology. The reader generally will not find simple solutions to symptoms, diseases and syndromes. In fact, the key to caring for geriatric patients is the ability to think both critically and divergently at the same time. Geriatrics encompasses multiple disciplines and spans all of the subspecialties. It requires knowledge of working within an interdisciplinary team. It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary. And most of all, it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care. This book aims to serve as an unparalleled resource for meeting these challenges. Updated and revised from the previous edition, this text features over 40 new peer reviewed chapters, new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine.
