[Production Management and Business Development](#) Bohuslava Mihalčová,Petra Szaryszová,Lenka Štofová,Michal Pružinský,Barbora Gontkovičová,2018-12-07 Trends in economic development rely on increasing human knowledge which stimulate the development of new sophisticated technologies With their utilization production is raised and the intent is to decrease natural resources consumption and protect and save our life environment as much as we can At the same time increasing

pressure is observed both from competition and customers. The way to be competitive is by improving manufacturing and services offered to the customer. These are the major challenges of contemporary enterprises. Organizations are improving their activities and management processes. This is necessary to manage the seemingly intensifying competitive markets successfully. Enterprises apply business optimizing solutions to meet new challenges and conditions. This way ensuring effective development for long term competitiveness in a global environment. This is necessary for the implementation of qualitative changes in the industrial policy. Process Control and Production Management MTS 2018 is a collection of research papers from an international authorship. The authors present case studies and empirical research which illustrates the progressive trends in business process management and the drive to increase enterprise sustainability development.

The Limits of Expertise R. Key Dismukes, Benjamin A. Berman, Loukia Loukopoulos, 2017-03-02

Why would highly skilled well trained pilots make errors that lead to accidents when they had safely completed many thousands of previous flights? The majority of all aviation accidents are attributed primarily to human error but this is often misinterpreted as evidence of lack of skill, vigilance or conscientiousness of the pilots. **The Limits of Expertise** is a fresh look at the causes of pilot error and aviation accidents, arguing that accidents can be understood only in the context of how the overall aviation system operates. The authors analyzed in great depth the 19 major U.S. airline accidents from 1991-2000 in which the National Transportation Safety Board (NTSB) found crew error to be a causal factor. Each accident is reviewed in a separate chapter that examines events and crew actions and explores the cognitive processes in play at each step. The approach is guided by extensive evidence from cognitive psychology that human skill and error are opposite sides of the same coin. The book examines the ways in which competing task demands, ambiguity and organizational pressures interact with cognitive processes to make all experts vulnerable to characteristic forms of error. The final chapter identifies themes cutting across the accidents, discusses the role of chance, criticizes simplistic concepts of causality of accidents and suggests ways to reduce vulnerability to these catastrophes. The authors' complementary experience allowed a unique approach to the study of accident investigation with the NTSB cognitive psychology research both in the lab and in the field, enormous first hand experience of piloting and application of aviation psychology in both civil and military operations. This combination allowed the authors to examine and explain the domain specific aspects of aviation operations and to extend advances in basic research in cognition to complex issues of human performance in the real world. Although **The Limits of Expertise** is directed to aviation operations, the implications are clear for understanding the decision processes, skilled performance and errors of professionals in many domains including medicine.

Human Factors and Design Yuri Spirochkin, 2023-02-27

This book describes various manifestations of human factors when interacting with potentially dangerous technical systems: airplanes, launch vehicles and spaceships, nuclear power plants, energy saturated ground vehicles and infrastructure facilities. The idea of the book arose from the desire to find a common ground between industries that are important for safety. Their similarity lies in addition to

the technological advancement of products and solutions in equally high safety requirements in particular taking into account the influence of human factor Thus it is of relevance to analyze an impact of human factor in the context of safety The matter is rather complex on the one hand humans manage technical systems on the other hand human errors negligence or evil intentions can turn the system into a threat with disastrous consequences However human interaction with any technical system begins earlier in the design stage In this stage designer being creator of the system must ensure a safe operation and take into consideration possible risks including those caused by human factors itself The book is interdisciplinary in nature and intended mainly for designers of technical systems aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems The examples given are intended to benefit from experiences of not one but a number of industries Runway Exit Designs for Capacity Improvement Demonstrations ,1992 **Guidebook for Air**

Cargo Facility Planning and Development Mike Maynard,2015 The guidebook presents a broad discussion of the various issues that must be addressed in planning air cargo facilities It describes tools and techniques for sizing facilities including data and updated metrics necessary to forecast future facility requirements as a function of changing market and economic conditions The procedures offered support airport operators in crafting effective business plans and development decisions that meet the industry's current and future technological operational and security challenges in a cost effective efficient and environmentally sensitive manner ICAO Journal ,2006 Official magazine of international civil aviation **Commercial**
