

Each diagram consists of overlapping circles whose radii increase by 1 from smaller to larger.

3.

a) Mark all points of intersection between circles whose radii have a constant sum of 12. (e.g.  $11+1$ ,  $10+2$ ,  $9+3$ ,  $8+4$ ,  $7+5$ ,  $6+6$ , ...)  
Connect the points that are closest to each other from circle to circle.

b) Choose a number 12, but bigger than 10 and repeat part a.

4.

Mark all points of intersection between circles whose radii have a constant difference of 8. (e.g.  $10-2$ ,  $9-3$ ,  $8-5$ , etc...)  
Connect the points that are closest to each other from circle to circle. There will be two branches.

b) Choose another whole number repeat part a with this choice of radii difference.

5.

Match each picture (i.e. problem #) with the conic section figure's definition below.  
An ellipse is the set of all points (or locus) whose sum of distances from two points is constant.  
A hyperbola is the locus of points whose difference from two other points is constant.  
A parabola is the locus of all points equidistant from a point and a line.  
What would the definition of the conic section for a circle be?  
How could a ray be considered a conic section?

**Exploring Linear Algebra** Crista Arangala, 2025-02-26 This text focuses on the primary topics in a first course in Linear Algebra. The author includes additional advanced topics related to data analysis, singular value decomposition, and connections to differential equations. This is a lab text that would lead a class through Linear Algebra using Mathematica demonstrations and Mathematica coding. The book includes interesting examples embedded in the projects. Examples include the discussions of Lights Out, Nim, the Hill Cipher, and a variety of relevant data science projects. The 2nd Edition contains Additional Theorems and Problems for students to prove or disprove; these act as theory exercises at the end of most sections of the text. Additional sections support Data Analytics techniques such as Kronecker sums and products and LU decomposition of the Vandermonde matrix. Updated and expanded end-of-chapter projects. Instructors and students alike have enjoyed this popular book as it offers the opportunity to add Mathematica to the Linear Algebra course. I would definitely use the book specifically the projects at the end of each section to motivate undergraduate research. Nick Luke, North Carolina A T State University. [The American Mathematical Monthly](#), 2008. **Measurement of the Inclusive Jet Cross Section with the ATLAS Detector at the Large Hadron Collider** Caterina Doglioni, 2012-07-28 Tests of the current understanding of physics at the highest energies achievable in man-made experiments are performed at CERN's Large Hadron Collider. In the theory of the strong force within the Standard Model of particle physics, Quantum Chromodynamics or QCD, confined quarks and gluons from the proton-proton scattering manifest themselves as groups of collimated particles. These particles are clustered into physically measurable objects called hadronic jets. As jets are widely produced at hadron colliders, they are the key physics objects for an early rediscovery of QCD. This thesis presents the first jet measurement from the ATLAS Collaboration at the LHC and confronts the experimental challenges of precision measurements. Inclusive jet cross-section data are then used to improve the knowledge of the momentum distribution of quarks and gluons within the proton and of the magnitude of the strong force. [Advances in Neural Information Processing Systems 17](#) Lawrence K. Saul, Yair Weiss, Léon Bottou, 2005 Papers presented at NIPS, the flagship meeting on neural computation, held in December 2004 in Vancouver. The annual Neural Information Processing Systems (NIPS) conference is the flagship meeting on neural computation. It draws a diverse group of attendees: physicists, neuroscientists, mathematicians, statisticians, and computer scientists. The presentations are interdisciplinary, with contributions in algorithms, learning theory, cognitive science, neuroscience, brain imaging, vision, speech, and signal processing, reinforcement learning, and control, emerging technologies, and applications. Only twenty-five percent of the papers submitted are accepted for presentation at NIPS, so the quality is exceptionally high. This volume contains the papers presented at the December 2004 conference held in Vancouver. **Subsurface Conditions** Keith Turner, Michael Shaw, Rosenbaum, 2008-01-26 Characterisation of the shallow subsurface has gained in importance as civil and geotechnical engineering and environmental applications have

become more dependent on a precise definition of geomechanical and geohydrological properties A better understanding of the subsurface conditions offers wide ranging benefits to governments industry and individual citizens Subsurface geological modelling became an economic and technologic reality in the late 1980 s when competing 3 D geoscientific information systems were the subject of considerable research and evaluation especially by the petroleum exploration industry Investigations in the shallow subsurface impose additional requirements that have only recently become technically and economically achievable The very shallow urban underground environment where many infrastructure and utilities elements are located presents the most difficult characterisation problems Subsurface modelling techniques have matured along with modern data base concepts The evolution of the Internet and Web browser technologies has expanded information transmission and dissemination capabilities Subsurface models are being integrated with decision support systems to provide predictions of technical and economic performance Yet even the most sophisticated of these models leave some uncertainty in geologic interpretation A variety of techniques for assessing uncertainty have been developed and are being evaluated
