1. **Newton's Laws of Motion**

- Newton's First Law of Motion: An object at rest stays at rest and an object in motion stays in motion with the same speed and in the same direction unless acted upon by an unbalanced force.
- Newton's Second Law of Motion: The acceleration of an object depends on two variables: the net force acting upon the object and the mass of the object.
- Newton's Third Law of Motion: For every action, there is an equal and opposite reaction.

Friction

Friction is a force that opposes motion between two surfaces in contact. Friction is caused by the interaction of irregularities on the surfaces in contact. Friction is a non-conservative force, meaning it does work on an object and transfers energy to the system.

Friction is often represented by the formula $F_f = \mu F_N$, where F_f is the friction force, μ is the coefficient of friction, and F_N is the normal force.
