## **Neuroscience Critique Exploring Limits Neurological:**

**Neuroscience and Critique** Jan De Vos, Ed Pluth, 2015-11-19 Recent years have seen a rapid growth in neuroscientific research and an expansion beyond basic research to incorporate elements of the arts, humanities, and social sciences. It has been suggested that the neurosciences will bring about major transformations in the understanding of ourselves, our culture, and our society. In academia, one finds debates within psychology, philosophy, and literature about the implications of developments within the neurosciences and the emerging fields of educational neuroscience, neuroeconomics, and neuroaesthetics. Also, bear witness to a neurological turn which is currently taking place. **Neuroscience and Critique** is a groundbreaking edited collection which reflects on the impact of neuroscience in contemporary social science and the humanities. It is the first book to consider possibilities for a critique of the theories, practices, and implications of contemporary neuroscience. Chapter 7 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives CC BY NC ND 3.0 license.

### **The Metamorphoses**

**of the Brain - Neurologisation and its Discontents** Jan De Vos, 2016-05-04 What are we exactly when we are said to be our brain? This question leads Jan De Vos to examine the different metamorphoses of the brain: the educated brain, the material brain, the iconographic brain, the sexual brain, the celebrated brain, and finally the political brain. This first protracted and sustained argument on neurologisation which lays bare its lineage with psychologisation should be taken seriously by psychologists, educationalists, sociologists, students of cultural studies, policy makers, and above all neuroscientists themselves.

**Challenges of Interdisciplinary Research in the Field of Critical (Sex/Gender) Neuroscience** Hannah Fitsch, Flora Lysen, Suparna Choudhury, 2022-02-17 **Conviction** Oliver Rollins, 2021-07-13 Exposing ethical dilemmas of neuroscientific research on violence, this book warns against a dystopian future in which behavior is narrowly defined in relation to our biological makeup. Biological explanations for violence have existed for centuries, as has criticism of this kind of deterministic science, haunted by a long history of horrific abuse. Yet this program has endured because of and not despite its notorious legacy. Today's scientists are well beyond the nature versus nurture debate. Instead, they contend that scientific progress has led to a nature and nurture biological and social stance that allows it to avoid the pitfalls of the past. In **Conviction**, Oliver Rollins cautions against this optimism, arguing that the way these categories are imagined belies a dangerous continuity between past and present. The late 1980s ushered in a wave of technological scientific advancements in the genetic and brain sciences. Rollins focuses on an often ignored strand of research: the neuroscience of violence, which he argues became a key player in the larger conversation about the biological origins of criminal violent behavior. Using powerful technologies, neuroscientists have rationalized an idea of the violent brain or a brain that bears the marks of predisposition toward dangerousness. Drawing on extensive analysis of neurobiological research, interviews with neuroscientists, and participant observation, Rollins finds that this construct of the brain is ill equipped to deal with the

complexities and contradictions of the social world much less the ethical implications of informing treatment based on such simplified definitions Rollins warns of the potentially devastating effects of a science that promises to predict criminals before the crime is committed in a world that already understands violence largely through a politic of inequality **Mayo**
