Advanced Data-Driven Uncertainty Optimization for Planning, Operation, and Analysis of Renewable Power Systems
Lipeng Zhu, Minghao Wang, Cong Zhang, Zhenjia Lin, Ying Zhang, 2026-01-09 The rapid deployment of renewable energy systems in the grid is reshaping the energy structure and significantly impacting the operational stability and reliability of power systems Renewable energies such as solar and wind pose significant challenges to the continuity and stability of power supply due to their variability and intermittency To address these challenges uncertainty analysis and optimization offer effective strategies to manage the uncertainties of renewable energy thereby enhancing the resilience and stability of power systems Traditional model based approaches while effective will ultimately struggle to handle the ever growing scale and various uncertainties of energy systems The development of machine learning and data science has played a significant role in overcoming the difficulties Data driven approaches freed from the limitations of traditional models effectively complement model driven uncertainty optimization methods They demonstrate great potential in uncertainty analysis operation and optimization of power systems The purpose of this research topic is to conduct uncertainty optimization planning and analysis of renewable energy power systems and investigate the application of data driven methods in the uncertainty optimization of renewable energy power systems This will ensure the secure reliable and efficient operation of power systems We hope that this research topic will encompass the latest technologies in advanced data driven uncertainty optimization methods for the planning operation and analysis of renewable energy power systems promoting the development of renewable energy power systems towards greater intelligence efficiency and reliability This Research Topic encourages the contributions of original research articles with new data information and findings and comprehensive reviews on the advanced data driven uncertainty optimization method for planning operation and analysis of renewable power systems and other relevant topics Topics of interest for publication include but are not limited to 1 Advanced optimization methods for

renewable energy power system planning 2 Uncertainty optimization techniques for the operation of renewable energy power systems 3 Risk assessment and early warning for renewable energy power system operation 4 Uncertainty analysis and computational methods for renewable energy systems 5 Energy storage optimization and planning considering stability and economics 6 Application of machine learning in power system optimal scheduling 7 Data driven renewable energy generation and load demand forecasting 8 Uncertainty analysis and optimization of active distribution networks 9 Big data based state monitoring of smart distribution networks 10 Machine learning based fault diagnosis in power systems 11 Prediction and optimization techniques for demand sides [E-Mobility](#) M. Kathiresan, G. R. Kanagachidambaresan, Sheldon S. Williamson, 2021-12-01 The book provides easy interpretable explanations for the key technologies involved in Electric Vehicles and Hybrid Electric Vehicles. The authors discuss the various electrical machines, drives and controls used in EV and HEV. The book provides a detailed coverage of Regenerative Braking Systems used in EV and HEV. The book also illustrates the battery technology and battery management systems in EV and HEV. This book is intended for academicians, researchers and industrialists. In addition, this book has the following features: Discusses the various Economic and Environmental Impact of Electric and Hybrid Electric Vehicles; Discusses the role of Artificial Intelligence in Electric Hybrid Electric Vehicles; Illustrates the concept of Vehicle to Grid Technology and the smart charging station infrastructure and issues involved in the same; Elucidates the concept of Internet of Vehicles; Presents the latest research and applications in alternate energy vehicles.

Data-driven Modeling and Optimization: Applications to Social Computing Chao Gao, Zhanwei Du, Lin Wang, Peican Zhu, 2022-09-14 [Electric Vehicle Progress](#), 1999 **Automating Building Energy Management for Accelerated Building Decarbonization: System Architecture and the Network Layer** James Kempf, 2025-01-22 Complete up to date reference on system architecture for building energy management systems. **Automating Building Energy Management for Accelerated Building Decarbonization** delivers detailed technical information on building energy management control technology and guidelines to implementing and deploying building energy management systems. The book provides a detailed look at the system architecture of cloud based building energy management systems and a comprehensive review of technology for the networking layer from the link layer through the application layer. Wired and wireless link layer protocols and Internet network layer protocols from the TCP IP suite are thoroughly reviewed and discussed in the context of deploying an in building operational technology network. At the application layer BACnet for large commercial and government buildings and Bluetooth Low Energy, Zigbee and Matter for smaller commercial and residential buildings are discussed in detail with focus on energy management and building decarbonization. The API standards OpenAPI 3.1 and AsyncAPI 3.0 are used to define example APIs for controlling an HVAC system illustrating how to provide API abstractions that simplify the development of building energy management applications and services. Finally a discussion of controlling onsite distributed energy resources such as solar panels and on site battery storage through SunSpec Modbus and communicating with the

utility through OpenADR and IEEE 2030.5 provide a solid technical foundation for implementing communication services in demand response and flexible load applications. Security is emphasized as a key property for the operational technology networks that run building energy systems up and down the stack. At the architectural level security functions including data origin authentication, confidentiality protection and key exchange are discussed in detail. Detailed information on security protocols including IPsec at the network layer, TLS at the transport layer and OAuth2.0 at the application layer is presented. In addition, advice on deploying security solutions in building energy management networks is provided. Throughout the book, QR codes provide access to short videos about topics where more depth is needed or that are only briefly covered. These allow the reader to view more information about important topics. *Automating Building Energy Management for Accelerated Building Decarbonization* is an essential resource for managers, engineers and other professionals involved in designing and building energy management services for commercial and residential buildings. It is also an excellent reference for university and training courses related to building decarbonization and renewable energy.

Fleet Owner, 1995 **Western Electrician**, 1900 Women Behind the Wheel Nancy A. Nichols, 2024-03-05

From the adolescent thrill of getting a driver's license to the dreaded commutes of adulthood from vintage muscle cars to electric vehicles this groundbreaking book reveals the outsized impact the car has had and will continue to have on the lives of women. Since their inception cars have defined American culture but until quite recently car histories were largely written by and about men with little attention given to the fascinating story of women and cars. In this engaging non-fiction narrative Nancy A. Nichols, the daughter of a used car salesman uses the cars her father sold and the ones her family drove to tell a larger story about how the car helped to define modern womanhood. From her sister's classic Mustang to her mother's Chevy Convertible to her own Honda minivan, Nichols tells a personal story in order to shed light on a universal one. Cars helped women secure the right to vote, changed the nature of romance and influenced both fashion and child-rearing customs. In the just over 100 years since their inception, cars have created possibilities for commerce and romance even as they exposed women to new kinds of danger. *Women Behind the Wheel* explores the uniquely gendered landscape of the automobile detailing the many reasons why cars are both more expensive and more dangerous for women drivers. The automobile is on the cusp of momentous change. As we advance into the era of electric, connected and autonomous vehicles, Nichols shows us why we should hit the brakes and look back in the rear view mirror at this long and fascinating history. What is the role of the car in our lives? Should we be more skeptical of technology in our society? In *Women Behind the Wheel*, Nichols argues convincingly that only by understanding the many ways the car has changed us can we hope to prepare ourselves for this brave new era.
