Flexible Electronics William S. Wong, Alberto Salleo, 2009-04-09 Flexible electronics is rapidly finding many main stream applications where low cost ruggedness light weight unconventional form factors and ease of manufacturability are just some of the important advantages over their conventional rigid substrate counterparts Flexible Electronics Materials and Applications surveys the materials systems and processes that are used to fabricate devices that can be employed in a wide variety of applications including flexible flat panel displays medical image sensors photovoltaics and electronic paper Materials discussed range from polymeric semiconductors to nanotube transparent conductors highlighting the important characteristics of each system and their target applications An overview of the performance benchmarks for the different materials is given in order to allow a direct comparison of these different technologies Furthermore the devices and processes most suitable for given applications in flexible electronics are identified Topics covered include An overview and history of flexible electronics Novel materials for solution processable thin film electronic devices and their properties Low temperature processing of conventional materials and devices on plastic foils Novel techniques such as printing and roll to roll processing for large area flexible electronics manufacturing Materials and device physics relevant to flexible electronics Device integration on flexible substrates Mechanical and electronic characteristics for thin film transistors and nano scale transparent conductors on flexible platforms Applications towards flexible displays sensors actuators solar energy radio frequency identification and micro electro mechanical systems Written by leading researchers in the field Flexible Electronics Materials and Applications serves as a reference for researchers engineers and students interested in the characteristics capabilities and limitations of these exciting materials and emerging applications

Organic Light-Emitting Materials and Devices Zhigang Rick Li, 2017-12-19 *Organic Light Emitting Materials and Devices* provides a single source of information covering all aspects of OLEDs including the systematic investigation of organic light emitting materials device physics and engineering and manufacturing and performance measurement techniques This Second Edition is a compilation of the advances made in recent years and of the challenges facing the future development of OLED technology Featuring chapters authored by internationally recognized academic and industrial experts this authoritative text Introduces the history fundamental physics and potential applications of OLEDs Reviews the synthesis properties and device performance of electroluminescent materials used in OLEDs Reflects the current state of molecular design exemplifying more than 600 light emitting polymers and highlighting the most efficient materials and devices Explores small molecules based OLEDs detailing hole and electron injection and electron transport materials electron and hole blocking materials sensitizers and fluorescent and phosphorescent light emitting materials Describes solution processable phosphorescent polymer LEDs energy transfer processes polarized OLEDs anode materials and vapor deposition manufacturing techniques employed in OLED fabrication Discusses flexible display the backplane circuit technology for organic light emitting displays and the latest microstructural characterization and performance measurement techniques Contains abundant diagrams device configurations and molecular structures clearly illustrating the presented ideas *Organic Light Emitting Materials and Devices* Second Edition offers a comprehensive overview of the OLED field and can serve as a primary reference for those needing additional information in any particular subarea of organic electroluminescence This book should attract the attention of materials scientists synthetic chemists solid state physicists and electronic device engineers as well as industrial managers and patent lawyers engaged in OLED related business areas

Times of Polymers (TOP) and Composites Domenico Acierno, Alberto D'Amore, Luigi Grassia, 2008-09-05 The International Conference on Times of Polymers TOP and Composites was held in September 2008 Ischia Italy This was the fourth of a series of biennial work shops on polymers timescales resulting from a joint initiative of the Second University of Naples SUN and the University of Naples Federico II Scientists from chemistry to physics to engineering areas formed a homogeneous community as the contributions even if spanning very different topics subtend the concept of timescale of polymer based materials In all about 150 papers were submitted by scientists from all over the world The conference is

organised in oral sessions subdivided into three main general topics namely Timescales of Polymers TP Composites and Nano Composites Polymer Chemistry and Physics which included the following sub topics Viscoelasticity Glassy State Thin Films Blends Organic Electronics OLED OTFT Polymer based Sensors Industrial Rheology Durability Degradation Polymer Processing Tissue Engineering Foams Biomaterials Cultural Heritage Fracture and Yielding Properties Modelling This book is organized in a way that the sequence of papers complies with the structure of the conference with many papers selected from the general poster session The first part of the book spanned over the timescales of polymers in absence of chemistry driven phenomena The time dependent behaviour of several classes of polymers was tackled from different perspectives from soft matter physics to structural design approach The second section was mainly devoted to the different aspects that influence the response properties of Nanocomposites as well as structural composites Many papers focused on the promising perspectives of carbon nanotubes organically modified clays and metallic nanoparticles based polymers Theoretical as well as experimental approaches were extensively addressed The third section was devoted to the chemistry induced physical changes in polymers From optical properties to biocompatibility a wide range of systems was presented The book is co edited by Alberto D Amore and Domenico Acierno the co chairmen of the conference that pre screened the submitted papers for topical applicability and by Luigi Grassia that with his invaluable support rendered realistic carrying out the book within a very narrow timescale
