Christoph Herwig, Ralf Pörtner, Johannes Möller, 2021-04-25 This is the second of two volumes that together provide an overview of the latest advances in the generation and application of digital twins in bioprocess design and optimization Both processes have undergone significant changes over the past few decades moving from data driven approaches into the 21st century digitalization of the bioprocess industry Moreover the high demand for biotechnological products calls for efficient methods during research and development as well as during tech transfer and routine manufacturing In this regard one promising tool is the use of digital twins which offer a virtual representation of the bioprocess They reflect the mechanistics of the biological system and the interactions between process parameters key performance indicators and product quality attributes in the form of a mathematical process model Furthermore digital twins allow us to use computer aided methods to gain an improved process understanding to test and plan novel bioprocesses and to efficiently monitor them This book focuses on the application of digital twins in various contexts e g computer aided experimental design seed train prediction and lifeline analysis Covering fundamentals as well as applications the two volumes offers the ideal introduction to the topic for researchers in academy and industry alike **Integrated Bioprocess Engineering** Clemens Posten, 2018-04-09

Bioprocess engineering employs microorganisms to produce biological products for medical and industrial applications The book covers engineering tasks around the cultivation process in bioreactors including topics like media design feeding strategies or cell harvesting All aspects are described from conceptual considerations to technical realization It gives insight to students of technical biology bioengineering and biotechnology by detailed explanations drawings formulas and example

processes In Bioprocess Engineering upstream bioreaction and downstream stages are closely linked to each other From a biological point of view photo biotechnology is in the centre of interest as well as processes where the particulate properties play an important role The main technical means are fermentation under highly controlled conditions mathematical modelling of bioprocesses including measurement of intracellular compounds as well as mechanical separation methods arising from downstream processing

*Bioprocess Engineering Principles* Pauline M. Doran, 2012-04-23 This welcome new edition discusses bioprocess engineering from the perspective of biology students It includes a great deal of new material and has been extensively revised and expanded These updates strengthen the book and maintain its position as the book of choice for senior undergraduates and graduates seeking to move from biochemistry microbiology molecular biology to bioprocess engineering All chapters thoroughly revised for current developments with over 200 pgs of new material including significant new content in Metabolic Engineering Sustainable Bioprocessing Membrane Filtration Turbulence and Impeller Design Downstream Processing Oxygen Transfer Systems Over 150 new problems and worked examples More than 100 new illustrations

Magnien, 1990 **Biotechnology: Measuring, modelling, and control** Hans-Jürgen Rehm, Gerald Reed, 1991 This volume covers monitoring of the biotechnological process with sophisticated analytical techniques use of the resulting data by means of mathematical models and computer aided control for improvement of the productivity of biotechnological processes The book consists of four main parts instruments for analysis and biosensing measuring techniques process models and their automation and control The use of different cell types recombinant microorganisms and reactor conditions are presented and all present strategies of monitoring and optimizing cell growth and product formation are discussed with regard to improved productivity Topics included are Methods and Instruments Biosensors Characterization of Bioreactors Determination of Cell Concentration Cell Models Stirred Tank Models Tower Reactor Models Process Models Control of Bioreactor Systems Automation Control of Downstream Processing **Modeling and Control of Biotechnical Processes 1992, (2nd IFAC Symposium) and Computer Applications in Fermentation Technology (5th International Conference)** Mohammed Nazmul Karim, G. Stephanopoulos, 1992 Hardbound This volume provides the state of the art findings of control theory and applications of biotechnical processes Topics covered include neural networks and their applications modeling identification AI and expert systems *Bioprocess Monitoring and Control* Bernd Hitzmann, 2020 Process monitoring and control are fundamental to all processes this holds especially for bioprocesses due to their complex nature Usually bioprocesses deal with living cells which have their own regulatory systems It helps to adjust the cell to its environmental condition This must not be the optimal condition that the cell needs to produce whatever

is desired Therefore a close monitoring of the cell and its environment is essential to provide optimal conditions for production Without measurement no information of the current process state is obtained In this book methods and techniques are provided for the monitoring and control of bioprocesses From new developments for sensors the application of spectroscopy and modelling approaches the estimation and observer implementation for ethanol production and the development and scale up of various bioprocesses and their closed loop control information are presented The processes discussed here are very diverse The major applications are cultivation processes where microorganisms were grown but also an incubation process of bird s eggs as well as an indoor climate control for humans will be discussed Altogether in 12 chapters nine original research papers and three reviews are presented Biotechnology R&D in the EC: Detailed final report of BAP contractors A.
