Mechanics Of Robotic Manipulation Intelligent Robotics And Autonomous Agents:

Mechanics of Robotic Manipulation Matthew T. Mason, 2001-06-08 The science and engineering of robotic manipulation Manipulation refers to a variety of physical changes made to the world around us Mechanics of Robotic Manipulation addresses one form of robotic manipulation moving objects and the various processes involved grasping carrying pushing dropping throwing and so on Unlike most books on the subject it focuses on manipulation rather than manipulators This attention to processes rather than devices allows a more fundamental approach leading to results that apply to a broad range of devices not just robotic arms The book draws both on classical mechanics and on classical planning which introduces the element of imperfect information The book does not propose a specific solution to the problem of manipulation but rather outlines a path of inquiry

Fundamentals of Mechanics of Robotic Manipulation Marco Ceccarelli, 2022-03-30 The book explores the fundamental issues of robot mechanics for both the analysis and design of manipulations manipulators and grippers taking into account a central role of mechanics and mechanical structures in the development and use of robotic systems with mechatronic design It examines manipulations that can be performed by robotic manipulators The contents of the book are kept at a fairly practical level with the aim to teach how to model simulate and operate robotic mechanical systems The chapters have been written and organized in a way that they can be read even separately so that they can be used separately for different courses and purposes The introduction illustrates motivations and historical developments of robotic mechanical systems Chapter 2 describes the analysis and design of manipulations by automatic machinery and robots chapter 3 deals with the mechanics of serial chain manipulators with the aim to propose algorithms for analysis simulation and design purposes chapter 4 introduces the mechanics of parallel manipulators chapter 5 addresses the attention to mechanical grippers and related mechanics of grasping

Robotics Goes MOOC Bruno Siciliano, 2025-04-30 With the massive and pervasive diffusion of robotics technology in our society we are heading towards a new type of AI which we call Physical AI at the intersection of Robotics with AI that is the science of robots and intelligent machines performing a physical action to help humans in their jobs of daily lives Physical assistance to disabled or elderly people reduction of risks and fatigue at work improvement of production processes of material goods and their sustainability safety efficiency and reduction of environmental impact in transportation of people and goods progress of diagnostic and surgical techniques are all examples of scenarios where the new InterAction Technology IAT is indispensable The interaction between robots and humans must be managed in a safe and reliable manner The robot becomes an ideal assistant like the tool used by a surgeon a craftsman a skilled worker The new generation of robots will co exist the cobots with humans not only in the workplace but gradually in homes and communities providing support in services entertainment education health manufacturing and care As widely discussed above interaction plays a crucial role for the development of modern robotic systems Grasping manipulation and cooperative manipulators are covered in the first part of the third book of the Robotics Goes MOOC project

respectively in Chapter 1 by Prattichizzo et al Chapter 2 by Kao et al and Chapter 3 by Caccavale Specific interaction issues along with the development of digital and physical interfaces are dealt with in Chapter 4 by Marchal et al and in Chapter 5 by Croft et al respectively Interaction between robot and human also means that a robot can be worn by a human as presented in Chapter 6 by Vitiello et al A different type of interaction at a cognitive and planning level is the focus of Chapter 7 by Lima devoted to multi robot systems and Chapter 8 by Song et al on networked cloud and fog robotics respectively

Algorithmic Foundations of Robotics V Jean-Daniel Boissonnat, Joel Burdick, Ken Goldberg, Seth Hutchinson, 2003-09-11 Selected contributions to the Workshop WAFR 2002 held December 15 17 2002 Nice France This fifth biannual Workshop on Algorithmic Foundations of Robotics focuses on algorithmic issues related to robotics and automation The design and analysis of robot algorithms raises fundamental questions in computer science computational geometry mechanical modeling operations research control theory and associated fields The highly selective program highlights significant new results such as algorithmic models and complexity bounds The validation of algorithms design concepts or techniques is the common thread running through this focused collection

Bio-Inspired Artificial Intelligence Dario Floreano, Claudio Mattiussi, 2023-04-04 A comprehensive introduction to new approaches in artificial intelligence and robotics that are inspired by self organizing biological processes and structures New approaches to artificial intelligence spring from the idea that intelligence emerges as much from cells bodies and societies as it does from evolution development and learning Traditionally artificial intelligence has been concerned with reproducing the abilities of human brains newer approaches take inspiration from a wider range of biological structures that are capable of autonomous self organization Examples of these new approaches include evolutionary computation and evolutionary electronics artificial neural networks immune systems biorobotics and swarm intelligence to mention only a few This book offers a comprehensive introduction to the emerging field of biologically inspired artificial intelligence that can be used as an upper level text or as a reference for researchers Each chapter presents computational approaches inspired by a different biological system each begins with background information about the biological system and then proceeds to develop computational models that make use of biological concepts The chapters cover evolutionary computation and electronics cellular systems neural systems including neuromorphic engineering developmental systems immune systems behavioral systems including several approaches to robotics including behavior based bio mimetic epigenetic and evolutionary robots and collective systems including swarm robotics as well as cooperative and competitive co evolving systems Chapters end with a concluding overview and suggested reading

Humanoid Robots Dragomir N. Nenchev, Atsushi Konno, Teppei Tsujita, 2018-11-21 Humanoid Robots Modeling and Control provides systematic presentation of the models used in the analysis design and control of humanoid robots The book starts with a historical overview of the field a summary of the current state of the art achievements and an outline of the related fields of research It moves on to explain the theoretical foundations in terms of

kinematic kineto static and dynamic relations Further on a detailed overview of biped balance control approaches is presented Models and control algorithms for cooperative object manipulation with a multi finger hand a dual arm and a multi robot system are also discussed One of the chapters is devoted to selected topics from the area of motion generation and control and their applications The final chapter focuses on simulation environments specifically on the step by step design of a simulator using the Matlab environment and tools This book will benefit readers with an advanced level of understanding of robotics mechanics and control such as graduate students academic and industrial researchers and professional engineers Researchers in the related fields of multi legged robots biomechanics physical therapy and physics based computer animation of articulated figures can also benefit from the models and computational algorithms presented in the book Provides a firm theoretical basis for modelling and control algorithm design Gives a systematic presentation of models and control algorithms Contains numerous implementation examples demonstrated with 43 video clips **AI Magazine** ,2000
