Jaswal, Desirée Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities. This poses problems particularly when science permeates every aspect of contemporary American life. Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases. Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom. Maintaining views on science as inherently objective isolates it from the world in which it is performed. STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital. We must create a STEM environment in which students with marginalized identities feel respected, listened to and valued. We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM    **Popular Mechanics**, 1945-08 Popular Mechanics inspires, instructs and influences readers to help them master the modern world.
