

The background of the slide features educational toys. On the left, there are two large dice, one purple and one blue, with white pips. On the right, there are three clear plastic jars with gold-colored lids, each containing colorful beads in blue, yellow, green, and orange. The entire scene is set against a light gray, textured background.

Mader-Stewart, 2018 In this mixed methods case study I examined the impact of daily number talks or strings on the development of mental math abilities of second graders within a

reform based classroom I also looked at whether or not the implementation of number talks would increase students ability to calculate with accuracy efficiency and flexibility Finally I looked at whether or not the implementation of number talks would increase students understanding of place value and number relationships The sample included one class of 19 second graders to determine the overall impact of number talks with a focus on six embedded case studies which amplified how this change occurred A preassessment interview two midassessments twenty four number talks a postnumber talk questionnaire and a postassessment interview were used over the span of six weeks The twenty four number talks were developed for students to invent construct and make sense of their own number strategies and their underlying key ideas After six weeks of number talks all students demonstrated an increase in accuracy efficiency and flexibility in their number calculations to 20 The case study data of two low achieving three average achieving and one high level student reveals growth in their ability to articulate their thinking with an increase in their understanding of place value and number relationships *The Impact of Number Talks on Number Sense* Jenna Poeltl,2021 The purpose of this research was to determine if consistent Number Talks has an impact on students number sense and ability to do mental math computations Number Talks is a pedagogical technique that is designed to promote student discourse and thinking about numbers and operations in nontraditional ways This research was conducted with four different 8th grade classes two Algebra 1 courses and two Introduction to Algebra courses A two sample t test was conducted to determine if there was a significant difference in the pretest score and post test score for each student in the control group versus the treatment group for the Intro classes and the Algebra 1 classes The test indicated that there was no significant difference for either group of students However more students in the Intro treatment group were able to solve the four basic operations on the post test using more than just the standard algorithm after the six weeks of Number Talks were implemented in their class Even though in this study there was no positive correlation between Number Talks and students number sense the researcher still believes that Number Talks helps students with mental computations and see the relationship between numbers and operations more clearly Future research should take place over a longer period of time and should be analysed using more than just a pretest and a post test
