Real-Time & Stream Data Management Wolfram Wingerath,Norbert Ritter,Felix Gessert,2019-01-02 While traditional databases excel at complex queries over historical data they are inherently pull based and therefore ill equipped to push new information to clients Systems for data stream management and processing on the other hand are natively pushoriented and thus facilitate reactive behavior However they do not retain data indefinitely and are therefore not able to answer historical queries The book provides an overview over the different push based mechanisms for data retrieval in each system class and the semantic differences between them It also provides a comprehensive overview over the current state of the art in real time databases

It first includes an in depth system survey of today's real time databases: *Firestore*, *Meteor*, *RethinkDB*, *Parse*, *Bagend* and others. Second, the high level classification scheme illustrated above provides a gentle introduction into the system space of data management. Abstracting from the extreme system diversity in this field, it helps readers build a mental model of the available options. *PeopleSoft Developer's Guide for PeopleTools & PeopleCode* Judi Doolittle, 2008-12-15 Oracle is placing its enterprise application strategy at the center of its future growth. Oracle PeopleSoft will be phasing out its current reports product soon and all reports will need to be rewritten in XML. Publisher **Database Design for Smarties** Robert J. Muller, 1999-03-08 Craft the Right Design Using UML.
