[Real World Data Mining Applications](#) Mahmoud Abou-Nasr, Stefan Lessmann, Robert Stahlbock, Gary M. Weiss, 2014-11-13

Data mining applications range from commercial to social domains with novel applications appearing swiftly for example within the context of social networks. The expanding application sphere and social reach of advanced data mining raise pertinent issues of privacy and security. Present day data mining is a progressive multidisciplinary endeavor. This inter and multidisciplinary approach is well reflected within the field of information systems. The information systems research addresses software and hardware requirements for supporting computationally and data intensive applications. Furthermore it encompasses analyzing system and data aspects and all manual or automated activities. In that respect research at the interface of information systems and data mining has significant potential to produce actionable knowledge vital for corporate decision making. The aim of the proposed volume is to provide a balanced treatment of the latest advances and developments in data mining in particular exploring synergies at the intersection with information systems. It will serve as a platform for academics and practitioners to highlight their recent achievements and reveal potential opportunities in the field. Thanks to its multidisciplinary nature the volume is expected to become a vital resource for a broad readership ranging from students throughout engineers and developers to researchers and academics.

Patterson, 2020-04-14 Finalist 2021 John Hope Franklin Prize given by the American Studies Association Seeking ways to understand video games beyond their imperial logics Patterson turns to erotics to reinvigorate the potential passions and pleasures of play Video games vastly outpace all other mediums of

entertainment in revenue and in global reach On the surface games do not appear ideological nor are they categorized as national products Instead they seem to reflect the open and uncontaminated reputation of information technology Video games are undeniably imperial products Their very existence has been conditioned upon the spread of militarized technology the exploitation of already existing labor and racial hierarchies in their manufacture and the utopian promises of digital technology Like literature and film before it video games have become the main artistic expression of empire today the open world empire formed through the routes of information technology and the violences of drone combat unending war and overseas massacres that occur with little scandal or protest Though often presented as purely technological feats video games are also artistic projects and as such they allow us an understanding of how war and imperial violence proceed under signs of openness transparency and digital utopia But the video game as Christopher B Patterson argues is also an inherently Asian commodity its hardware is assembled in Asia its most talented e sports players are of Asian origin Nintendo Sony and Sega have defined and dominated the genre Games draw on established discourses of Asia to provide an Asiatic space a playful sphere of racial otherness that straddles notions of the queer the exotic the bizarre and the erotic Thinking through games like Overwatch Call of Duty 4 Modern Warfare Shenmue II and Alien Isolation Patterson reads against empire by playing games erotically as players do seeing games as Asiatic playthings that afford new passions pleasures desires and attachments
