Bier,1988 A new technique has been developed for designing precise two and three dimensional shapes rapidly and interactively A synthesis of the best properties of grid based systems constraint networks and drafting has resulted in a new technique called snap dragging To aid precise construction a set of lines circles planes and spheres called alignment objects are constructed by the system at a set of sloped angles and distances specified by the user These alignment objects are constructed at each vertex or edge that the user has declared to be hot of interest Vertices and edges can also be made hot by the system automatically through some heuristics The user can snap the cursor onto these alignment objects onto their points or lines of intersections or onto scene objects using an adjustable gravity mapping Finally the user can translate rotate scale and skew shapes by specifying which operation is desired then grabbing a point on the object and dragging it to a suitable precise location Snap dragging was incorporated into prototype two dimensional illustration system at Xerox PARC which has been used successfully by a community of users since 1986 Essays on Bid-ask Spreads, Term Premia and Excess Returns Pu Shen,1993 **The Population of Kentucky** Carroll Davidson Phillips,Ernest D.
