Bio-inspired Algorithms in Machine Learning and Deep Learning for Disease Detection Balasubramaniam S, Seifedine Kadry, Manoj Kumar TK, K. Satheesh Kumar, 2025-03-13 Currently computational intelligence approaches are utilised in various science and engineering applications to analyse information make decisions and achieve optimisation goals Over the past few decades various techniques and algorithms have been created in disciplines such as genetic algorithms artificial neural networks evolutionary algorithms and fuzzy algorithms In the coming years intelligent optimisation algorithms are anticipated to become more efficient in addressing various issues in engineering scientific medical space and artificial satellite fields particularly in early disease diagnosis A metaheuristic in computer science is designed to discover optimisation algorithms capable of solving intricate issues Metaheuristics are optimisation algorithms that mimic biological behaviours of animals or birds and are utilised to discover the best solution for a certain problem A meta heuristic is an advanced approach used by heuristics to tackle intricate optimisation problems A metaheuristic in mathematical programming is a method that seeks a solution to an optimisation problem Metaheuristics utilise a heuristic function to assist in the search process Heuristic search can be categorised as blind search or informed search Meta heuristic optimisation algorithms are gaining popularity in various applications due to their simplicity independence from data trends ability to find optimal solutions and versatility across different fields Recently many nature inspired computation algorithms have been utilised to diagnose people with different diseases Nature inspired methodologies are now widely utilised across several fields for tasks such as data analysis decision making and optimisation Techniques inspired by nature are categorised as either biology based or natural phenomena based Bioinspired computing encompasses various topics in computer science mathematics and biology in recent years Bio inspired computer optimisation algorithms are a developing method that utilises concepts and inspiration from biological development to create new and resilient competitive strategies Bio inspired optimisation algorithms have gained recognition in machine learning and deep learning for solving complicated issues in science and engineering Utilising BIAs learning methods with machine learning and deep learning shows great promise for accurately classifying medical conditions This book explores the historical development of bio inspired algorithms and their application in machine learning and deep learning models for disease diagnosis including COVID 19 heart diseases cancer diabetes and some other diseases It discusses the advantages of using bio inspired algorithms in disease diagnosis and concludes with research directions and future prospects in this field *Bio-Inspired Computing: Theories and Applications* Linqiang Pan, Dongming Zhao, Lianghao Li, Jianqing Lin, 2023-04-17 This book constitutes the refereed proceedings of the 17th International Conference on Bio Inspired Computing Theories and Applications BIC TA 2022 held in Wuhan China during December 16 18 2022 The 56 full papers included in this book were carefully reviewed and selected from 148 submissions They were organized in topical sections as follows evolutionary computation and swarm intelligence machine

learning and deep learning intelligent control and simulation and molecular computing and nanotechnology Innovative Computational Intelligence: A Rough Guide to 134 Clever Algorithms Bo Xing, Wen-Jing Gao, 2013-12-13 The first notable feature of this book is its innovation Computational intelligence CI a fast evolving area is currently attracting lots of researchers attention in dealing with many complex problems At present there are quite a lot competing books existing in the market Nevertheless the present book is markedly different from the existing books in that it presents new paradigms of CI that have rarely mentioned before as opposed to the traditional CI techniques or methodologies employed in other books During the past decade a number of new CI algorithms are proposed Unfortunately they spread in a number of unrelated publishing directions which may hamper the use of such published resources These provide us with motivation to analyze the existing research for categorizing and synthesizing it in a meaningful manner The mission of this book is really important since those algorithms are going to be a new revolution in computer science We hope it will stimulate the readers to make novel contributions or even start a new paradigm based on nature phenomena Although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners We believe that the book will be instrumental in initiating an integrated approach to complex problems by allowing cross fertilization of design principles from different design philosophies The second feature of this book is its comprehensiveness Through an extensive literature research there are 134 innovative CI algorithms covered in this book

Bio-inspired Computing - Theories and Applications Maoguo Gong, Linqiang Pan, Tao Song, Gexiang Zhang, 2017-01-07 The two volume set CCIS 681 and CCIS 682 constitutes the proceedings of the 11th International Conference on Bio Inspired Computing Theories and Applications BIC TA 2016 held in Xi an China in October 2016 The 115 revised full papers presented were carefully reviewed and selected from 343 submissions The papers of Part I are organized in topical sections on DNA Computing Membrane Computing Neural Computing Machine Learning The papers of Part II are organized in topical sections on Evolutionary Computing Multi objective Optimization Pattern Recognition Others
