

Membrane computing

- A model of computing which abstracts from the functioning and structure of living cells (**P systems**) – Păun, 2000
- Three essential features: a hierarchical arrangement of membranes delimiting regions(*membrane structure*) –*tree structure, some multisets of objects and finite sets of rules associated to regions*
- *A P system evolves from one configuration to the other by applying the rules according to a given strategy (maximally parallel manner)*
- *Rules can transform objects, move objects, and even modify the membrane structure (creation/division/dissolution/moving) It generalizes (includes) L systems and DNA computing*
