Firms' Responses to Anticipated Reductions in Tax Rates Myron S. Scholes,G. Peter Wilson,Mark A. Wolfson,1992 The 1986 Tax Act in the U S gradually reduced corporate tax rates from 46 percent prior to the Act to 34 percent by the middle of 1988 This reduction gave firms an incentive in 1986 and 1987 to shift taxable income to future years when tax rates would be lower There are substantial impediments however to shifting taxable income across periods notably offsetting tax consequences to other contracting parties and a host of nontax costs and it becomes an empirical question as to whether the benefits of shifting taxable income are sufficient to overcome the impediments This paper examines whether firms deferred income recognition and or accelerated expense recognition in anticipation of these declining tax rates We find statistically significant evidence that firms shifted gross margin from the quarter immediately preceding and anticipated decrease in tax rates to the next quarter We estimate that on average the 812 firms in our sample saved approximately five hundred thousand dollars in taxes by deferring sales At a gross margin rate of one third this amounts to nearly twenty billion dollars of shifted sales for our sample firms      **Effects of Nitrogen and Shearing Treatments on Growth and Quality of Douglas-fir Christmas Trees in Western Washington** Alex G.
