 BENEFITS A bridge between the 68HC12 and the 68HC11 Focuses on the 68HC12 but includes material for and provides  
 software for the older 68HC11 A new version of Forth WHYP Words to Help You Program designed for use in embedded  
 systems WHYP can easily be installed on any 68HC12 system including the most popular development boards from Motorola  
 and Axiom Manufacturing It consists of two parts some 68HC12 subroutines that reside on the target system typically an  
 evaluation board and a C program that runs on a PC and communicates with the 68HC12 target system through a serial line  
 It is a sub routine threaded language which means that WHYP words are just the names of 68HC12 11 subroutines New  
 WHYP words can be defined simply by stringing previously defined WHYP words together The first five chapters of the text  
 explain how to make the programming of the 68HC12 simple and interactive and in the process develops the entire WHYP  
 language from scratch step by step The software is provided on disk with the text and the latest versions of the software will  
 be available on the authors web site An abundance of worked examples and many chapter end exerc      **Weekly Philatelic**  
**Gossip** ,1925      **The Essence of Rum: a Theory of the Intensional and Extensional Aspects of Lisp-type**  
**Computation** Carolyn L. Talcott,Stanford University. Computer Science Department,1985 Rum is a theory of applicative side  
 effect free computations over an algebraic data structure It goes beyond a theory of functions computed by programs  
 treating both intensional and extensional aspects of computation Powerful programming tools such as streams object  
 oriented programming escape mechanisms and co routines can be represented Intensional properties include the number of  
 multiplications executed the number of context switches and the maximum stack depth required in a computation  
 Extensional properties include notions of equality for streams and co routines and characterization of functionals  
 implementing strategies for searching tree structured spaces Precise definitions of informal concepts such as stream and co  
 routine are given and their mathematical theory is developed Operations on programs treated include program  
 transformations which introduce functional and control abstractions a compiling morphism that provides a representation of  
 control abstractions as functional abstractions and operations that transform intensional properties to extensional properties  
 The goal is not only to account for programming practice in Lisp but also to improve practice by providing mathematical tools  
 for developing programs and building programming systems Rum views computation as a process of generating computation  
 structures trees for context independent computations and sequences for context dependent computations The recursion

theorem gives a fixed point function that computes computationally minimal fixed points The context insensitivity theorem says that context dependent computations are uniformly parameterized by the calling context and that computations in which context dependence is localized can be treated like context independent computations
