CUDA by Example Jason Sanders, Edward Kandrot, 2011. The complete guide to developing high performance applications with CUDA written by CUDA development team members and supported by NVIDIA. Breakthrough techniques for using the power of graphics processors to create high performance general purpose applications. Packed with realistic C based examples from basic to advanced. Covers one of today's most highly anticipated new technologies for software development wherever performance is crucial: finance, design, automation, science, simulation, graphics and beyond. NVIDIA graphics processors have immense computational power. With NVIDIA's breakthrough CUDA software platform, that power can be put to work in virtually any type of software development that requires exceptionally high performance, from finance to physics. Now, for the first time, two of NVIDIA's senior CUDA developers thoroughly introduce the platform and show developers exactly how to make the most of it. CUDA C by Example is the first book on CUDA development for professional programmers and the only book created with NVIDIA's direct involvement. Concise and practical, it focuses on presenting proven techniques and concrete example code for building high performance, parallelized CUDA programs with C. Programmers familiar with C will need no other skills or experience to get started making high performance programming more accessible than it's ever been before.

GPU Powered VDI Jan Meier, 2018-06-21. User demands on the systems have risen continuously in recent years. In addition, more and more software products, especially the operating systems, Windows themselves, no longer calculate the graphic representation on the CPU (Central Processing Unit). Instead, they calculate it on the GPU (Graphics Processing Unit) optimized for this purpose. If no GPU is available, the calculation continues to be performed on the CPU. Especially when using virtual desktops, i.e. desktops that are provided in the data center, the lack of GPU is often a clear disadvantage compared to classic PCs. In addition, the load on the corresponding servers is getting significantly higher and the number of users per physical server decreases. The costs per user increase. The industry recognized this disadvantage several years ago and introduced the GPU Pass through technology. A physical graphics card is assigned to a virtual machine. This can then use the full power of the graphics card, but each virtual machine requires its own graphics card. The costs per user increase. To resolve this issue, NVIDIA has released GRID.

technology This makes it possible for several virtual machines to share a graphics card but still maintain full performance similar to what already happens in all virtual environments with the CPU You will learn what to consider when planning a v GPU environment and learn step by step how to deploy it with Citrix and NVIDIA This is followed by monitoring the environment and correcting known errors Contents excerpt Plan v GPU TypesLicense VariantsHDX HDX 3D ProDoGraphics CardsLicense ServerVirtual Delivery AgentCheckGPU MonitoringNVIDIA SMIGPU ProfilerActSystem Load3Dconnexion DevicesTroubleshooting
