study investigated the relationship between the scales used for the Nevada state assessments and the RIT scales used to report performance on NWEA tests. The study determined RIT score equivalents for Nevada CRT and ITBS performance levels in reading and mathematics. Nevada CRT test records for more than 2 000 students were included in this study. Three methods generated an estimate of RIT cut scores that could be used to project Nevada CRT performance levels. Rasch, SOS methods generally produced the most accurate cut score estimates. Accuracy of predicting Nevada CRT passing performance was above 84% for all grades when using the best methodology. Type I errors ranged from about 8% to 14% when the best methodology was employed.
