Remote Sensing Handbook, Volume II Prasad S. Thenkabail, 2024-11-29 Volume II of the Six Volume Remote Sensing Handbook Second Edition is focused on digital image processing including image classification methods in land cover and land use. It discusses object based segmentation and pixel based image processing algorithms, change detection techniques and image classification for a wide array of applications including land use, land cover, croplands, urban studies, processing hyperspectral remote sensing data, thermal imagery, light detection and ranging LiDAR, geoprocessing workflows, frontiers of GIScience and future pathways. This thoroughly revised and updated volume draws on the expertise of a diverse array of leading international authorities in remote sensing and provides an essential resource for researchers at all levels interested in using remote sensing. It integrates discussions of remote sensing principles, data methods, development, applications and scientific and social context. Features: Provides the most up to date comprehensive coverage of digital image processing. Highlights object based image analysis OBIA and pixel based classification methods and techniques of digital image processing. Demonstrates practical examples of image processing for a myriad of applications such as land use, land cover, croplands and urban. Establishes image processing using different types of remote sensing data that includes multispectral, radar, LiDAR, thermal and hyperspectral. Highlights change detection, geoprocessing and GIScience. This volume is an excellent resource for the entire remote sensing and GIS community. Academics, researchers, undergraduate and graduate students as well as practitioners, decision makers and policymakers will benefit from the expertise of the professionals featured in this book and their extensive knowledge of new and emerging trends.

Object-Based Image Analysis Thomas Blaschke, Stefan Lang, Geoffrey Hay, 2008-08-09 This book brings together a collection of invited interdisciplinary perspectives on the recent topic of Object based Image Analysis OBIA. Its content is based on select papers from the 1st OBIA International Conference held in Salzburg in July 2006 and is enriched by several invited chapters. All submissions have passed through a blind peer review process resulting in what we believe is a timely volume of the highest scientific, theoretical and technical standards. The concept of OBIA first gained widespread interest within the GIScience/Geographic Information Science community circa 2000 with the advent of the first commercial software for what was then termed object oriented image analysis. However, it is widely agreed that OBIA builds on older segmentation, edge detection and classification concepts that have been used in remote sensing image analysis for several decades. Nevertheless, its emergence has provided a new critical bridge to spatial concepts applied in multiscale landscape analysis, Geographic Information Systems (GIS) and the synergy between image objects and their radiometric characteristics and analyses in Earth Observation data.

Remote Sensing Handbook - Three Volume Set Prasad Thenkabail, 2018-10-03 A volume in the three volume Remote Sensing Handbook series. Remote Sensing of Water Resources, Disasters and Urban Studies documents the scientific and methodological advances that have taken place during the last 50 years. Characterization Classification and Accuracies and Land Reso **Use of the Normalized Difference Vegetation Index (NDVI) to Assess Land Degradation at Multiple Scales** Genesis T. Yengoh, David Dent, Lennart Olsson, Anna E. Tengberg, Compton J. Tucker III, 2015-11-11

This report examines the scientific basis for the use of remotely sensed data particularly Normalized Difference Vegetation Index NDVI primarily for the assessment of land degradation at different scales and for a range of applications including resilience of agro ecosystems Evidence is drawn from a wide range of investigations primarily from the scientific peer reviewed literature but also non journal sources The literature review has been corroborated by interviews with leading specialists in the field The report reviews the use of NDVI for a range of themes related to land degradation including land cover change drought monitoring and early warning systems desertification processes greening trends soil erosion and salinization vegetation burning and recovery after fire biodiversity loss and soil carbon This SpringerBrief also discusses the limits of the use of NDVI for land degradation assessment and potential for future directions of use A substantial body of peer reviewed research lends unequivocal support for the use of coarse resolution time series of NDVI data for studying vegetation dynamics at global continental and sub continental levels There is compelling evidence that these data are highly correlated with biophysically meaningful vegetation characteristics such as photosynthetic capacity and primary production that are closely related to land degradation and to agroecosystem resilience **New West Indian guide** ,2004 **The Official Railway Guide** ,1874 Remotely Sensed Data
