**INTRODUCTION TO JAVA**

**A PROGRAM** is a set of instructions a computer can execute to perform a task.

**SYNTAX** are rules that specify the basic vocabulary of a programming language, and states what can and cannot be used.

**SEMANTICS** refer to the meaning of a program. It's the way that the code behaves and the rules that govern how it operates.

**COMMENTS** are ignored by the computer. They are for human readers only. To make a single comment, use // to make many comments across multiple lines, use /\* (starts with and ends with) \*/.

**COMMANDS**

**SYSTEMS**

**CLASS** is a template for objects. It defines the properties and behaviors that objects of the class share.

**ENUM**

**STRINGS, OBJECTS, ENUMS AND SUBROUTINES**

**CLASS**

In Java, every subroutine is contained in a class or in an object. Some classes that are standard parts of the Java language contain predefined subroutines that you can use. These are called methods. Methods can be used to manipulate that object.

**SUBROUTINES**

In Java, every subroutine is contained in a class or in an object. Some classes that are standard parts of the Java language contain predefined subroutines that you can use. These are called methods. Methods can be used to manipulate that object.

**CLASSES**

Classes in Java have two different functions:

1. A class can group together variables and subroutines contained in that class. This group is called static members of the class.
2. Classes are used to describe objects. Meaning, the class of an object identifies what subroutines and variables are contained in that object.

**SUBROUTINE EXAMPLE: `System.out.println`**

The subroutine is used to display information to the user.

```
System.out.println("Hello World"); //Output the message "Hello World"
```

Output is one of Java's standard classes.

```
out is one of the static members contained in this class.
```

This subroutine "System.out" refers to an object, and that object has methods or subroutines of its own.

```
"println" and "print" is a compound identifier or, code that refers to the "println" method (subroutine) within the "out" object of the "System" class.
```
