To determine the required Fall Clearance add the appropriate factors together, this will give you the safe Required Distance (RD) below the anchorage connection point for work which is to be carried out where there is any risk of falling.

$$RD = LL + DD + HH + C$$

1. Add 1 ft. to DD for free-fall over 6 ft. (1.8 m) up to 12 ft. (3.6 m) or for person over 310 lbs. (140.6 kg) up to 420 lbs. (190.5 kg) with 6 ft. (1.8 m) max. free-fall for ANSI & OSHA compliant lanyards.
2. Add 1.7 ft. (0.52 m) to DD for Canadian CSA Z259.11-05 (E6) compliant lanyard.
3. D-ring slide and harness stretch factors are built into wC.
4. DD shown in e.g. assumes maximum allowable amounts.
5. See User Instruction Manual for additional information.

information available on neurologic and cardiac emergencies. From the reviews of the seventh edition Collectively they have once again produced an excellent text that manages to cover the broad scope of emergency medicine while remaining an easily readable and practical resource. Last for the inevitable comparison of this current edition of Tintinalli's Emergency Medicine with other available emergency medicine textbooks available in my opinion Tintinalli's still comes out on top. It is more concise and easier to read than some yet it covers the breadth of emergency medicine practice more comprehensively than others. Just as previous editions did the seventh presents all of the most pertinent and up to date information in a well organized format that is comprehensive yet easy to read. That and many of the attractive new features in this current edition will ensure its place on my bookshelf for years to come.
