Applied Neuroimaging for the Diagnosis and Prognosis of Cerebrovascular Disease Mingming Lu, Jianming Cai, Jieqiong Wang, 2025-11-14 Neuroimaging plays a crucial role in the diagnosis and prognosis of cerebrovascular diseases. By using advanced imaging techniques, neuroimaging can reveal the anatomical structure and function of the brain, providing important evidence for the diagnosis and treatment of cerebrovascular diseases. However, with the development of new imaging technologies, more neuroimaging biomarkers are warranted to be found and evaluated. Thus, further investigation of advanced neuroimaging will improve the diagnosis and prognosis of cerebrovascular diseases by providing detailed brain images and the ability to dynamically monitor changes in the condition, providing patients with more effective treatment options and better prognoses. This research topic highlights the current progression of applied neuroimaging for the diagnosis and prognosis of cerebrovascular disease, including intracranial atherosclerosis, carotid atherosclerosis, moyamoya vasculopathy, cerebral small vessel disease, etc. Topics of interest include, but are not limited to, the following fields: Basic studies of neuroimaging biomarkers or imaging technology development to improve the diagnosis and outcome prediction of different kinds of cerebrovascular disease; Clinical research for the diagnosis and prognosis of cerebrovascular disease using imaging methods including computed tomography (CT), magnetic resonance imaging (MRI), single photon emission computed tomography (SPECT), positron emission tomography (PET), digital subtraction angiography (DSA), etc. Imaging evidence for the effectiveness of medical therapy and novel operative techniques in the management of ischemic or hemorrhagic cerebrovascular disease.

George Westinghouse William R. Huber, 2022-02-14 While most know Thomas Edison for his invention of the light bulb, his counterpart George Westinghouse is too often overlooked. Westinghouse, however, became known as one of the most prolific inventors and businessmen of the Industrial Revolution. This biography reveals the man whose teachers suspected was mentally disabled and who quit college after one semester yet founded more than 60 different companies, employing 50,000 people and receiving 361 U.S. patents. He later fought the Battle of the Currents (AC vs DC) with Thomas Edison and won. Westinghouse, with his engineers, provided power and light for the 1893 World's Columbian Exposition in Chicago. They harnessed the massive power of Niagara Falls and sent it over wires to light Buffalo and eventually the Northeast. His electric engines powered trains, and his air brakes stopped them. His scientific contributions forever changed the world.
