Nieuwe producten bedenken Gijs van Wulfen, 2006 Praktisch stappenplan voor het concipi ren van idee n voor nieuwe producten het uitwerken ervan en de acceptatie door betrokkenen van vernieuwingen **Swarm Planning** Rob Roggema, 2013-09-11 This book shows that the problem of climate adaptation which is described in social planning terms as wicked is at odds with the contemporary practice of spatial planning The author proposes a new adjusted framework which is more adaptable to unpredictable wicked dynamic and non linear processes The inspiration for this new method is the behaviour of swarms bees ants birds and fish are capable of self organization which enables the system to become less vulnerable to sudden environmental changes The framework proposed in Swarm Planning consists of these four elements Two levels of complexity the first being the whole system and the second its individual components Each of these has different attributes for adapting to change Five layers consisting of networks focal points unplanned space natural resources and emerging occupation patterns Each layer has its own spatial dynamic and each is connected to a spatial scale Non linear processes which emerge in different parts of the framework and include emerging patterns connectedness and tipping points among others Two planning processes the first from small to large works upward from the slowest changing elements to more rapidly changing ones The second on the list of partners addresses each layer from networks through emerging occupation patterns Swarm Planning applies this framework to a series of pilot studies and appraises its performance using criteria for an adaptive landscape The results show that the use of the Swarm Planning Framework reduces the vulnerability of landscapes as well as the impact of climate hazards and disasters improves response to unexpected hazards and contains adaptation strategies This book is a must for planners in government and the private sector as it outlines the concept strategies and techniques for swarm planning It is also an important guide for policymakers looking to engage communities in a dialogue about the adaptation planning process Professor John Martin La Trobe University The ultimate value of the book lies in encouraging the planning community to consider options that go far beyond those offered by business as usual planning methodologies developed for a set of operating conditions that are fast becoming obsolete As such it makes an important and much needed contribution to the field Assistant Professor Dr Chrisna du Plessis University of Pretoria

Adaptation to Climate Change: A Spatial Challenge Rob Roggema, 2010-03-12 As it becomes clear that climate change is not easily within the boundaries of the 1990 s society needs to be prepared and needs to anticipate future changes due to the uncertain changes in climate So far extensive research has been carried out on several issues including the coastal defence or shifting ecozones However the role spatial design and planning can play in adapting to climate change has not yet been focused on This book illuminates the way adaptation to climate change is tackled in water management ecology coastal defence the urban environment and energy The question posed is how each sector can anticipate climate change by creating spatial designs and plans The main message of this book is that spatial design and planning are a very useful tool in adapting

to climate change It offers an integral view on the issue it is capable in dealing with uncertainties and it opens the way to creative and anticipative solutions Dealing with adaptation to climate change requires a shift in mindset from a technical rational way of thinking towards an integral proactive one A new era in spatial design and planning looms on the horizon

Creating Innovative Products and Services Gijs van Wulfen, 2016-05-13 Really new products and services are scarce yet the need for them is huge That s why Innovation is an important managerial instrument but many of us struggle with how to approach it Gijs van Wulfen s Creating Innovative Products and Services is an essential read for anyone involved in new product or service design brand development new business development or organizational development because it unfuzzies the front end of innovation with practical tools effective checklists and an inspiring innovation route map Gijs van Wulfen explains how to Build a committed ideation team compile a concrete innovation assignment and identify opportunities Explore trends technology and potential customers then choose the most positive opportunities and customer insights to transfer to the next step raise ideas Develop twelve new promising innovative product or service concepts Check the concepts in qualitative research among potential clients and improve them Work the best into a tangible mini business case per product idea and present them for decision making and adoption in the regular stage gate development process The effective 5 step FORTH method presented in this book will jump start your product and service innovations The success of this practical approach is highlighted in a case study of one of the largest insurance companies in The Netherlands Univ VGZ IZA Trias and is suitable for both business to consumer and business to business markets Creating Innovative Products and Services has been written for directors managers advisors and innovation specialists in organisations who are responsible for or involved in product innovation In it you will find practical guidance through every stage **Swarming Landscapes** Rob Roggema, 2012-12-02 This book advocates a fresh approach to planning that anticipates rather than reacts to the changes in climate currently in process Today s spatial planning procedures rely on historical evidence instead of preparing for factors that by definition lie in the future yet which are relatively uncontroversial shortages of water sea level rise and rises in average temperatures being but three examples Arguing for more flexibility the contributors view complexity as the key to transforming the way we plan in order to better equip us to face uncertainties about our future environment **Vrij**
