- The Format Painter** copies and pastes formatting from one cell or range to another without duplicating any data.
- You can format a text string within a cell in **Edit mode**.
- The appearance of text is determined by its **typeface**, which is the specific design of a set of characters, including letters, numbers, punctuation marks, and symbols.
- Every font can be formatted with a font style such as **italic**, **bold**, or **bold italic** and special effects such as **underline**, **strikethrough**, and **color**.
- You can rotate content in the cell.
- The **Comma** style adds a thousands separator and two decimal places to the right of the decimal point, and rounds up values by their decimal points. You can change how many decimal places are displayed.
- A **font** is a set of characters that employ the same typeface, such as Arial, Times New Roman, and Comic Sans.
- The **Accounting** style lines up currency values by their currency symbol and decimal points; negative numbers are enclosed in parentheses.
- The **Alignment** group has buttons for setting the horizontal and vertical alignment, the orientation, indents, and text wrapping of text in a cell, as well as merging cells.
- You can **merge**, or combine, several cells into one cell. This content is merged and centered across the range A4:B5.
- You can set the **font size** to increase or decrease the size of the text. Font sizes are measured in **points**, where one point is approximately 1/72 of an inch.
