Green Software Defined Radios Liesbet Van der Perre, Jan Craninckx, Antoine Dejonghe, 2008-12-21

Green Software Defined Radios the title of this book may have originated from a lack of inspiration and the combination of hard work, jet lag, and drinking green tea. The message we want to convey however is that SDRs are a promising technology for the future providing they are designed for efficient usage of scarce resources: energy and spectrum. In the last years the R & D teams focusing on wireless communication around the world and at IMEC specially have realized great breakthroughs. It is our honor building on this knowledge to bring a comprehensive overview of the essential technologies. We are grateful that Springer is willing to publish in their collection on radio technologies a book on green SDRs, a weird species still today yet maybe the baseline for the day after tomorrow. Dear reader we wish that you find in the following pages including the references some interesting insights and that this book may live more or less up to your expectations and hopefully more than less. This book is closing state that the quest for Green SDRs has not ended this is just the beginning. Concerning this book however we are happy that today the opposite is true. We want to acknowledge our colleagues at IMEC for their great scientific contribution and even more for the enjoyable cooperation.

Management and Routing in Mobile Wireless Networks Amitava Mukherjee, Somprakash Bandyopadhyay, Debashis Saha, 2003. Annotation: The most common complaints of today's cell phone users are poor reception, a lost signal that cuts off a call, and the inability to put a call through. Today's wireless providers struggle to ensure these problems do not occur. This book is an in-depth examination of two of the hottest research areas relating to these challenges: location management and mobile wireless routing.

Cognitive Radio Technology Bruce A. Fette, 2009-03-23. The most comprehensive book on cognitive radio technologies bringing together everything a wireless engineer needs to know in this important and growing field.

Heterogeneous Cellular Networks Rose Qingyang Hu, Yi Qian, 2013-04-03. A timely publication providing coverage of radio resource management, mobility management, and standardization in heterogeneous cellular networks. The topic of heterogeneous cellular networks has gained momentum in industry and the research community, attracting the attention of standardization bodies such as 3GPP LTE and IEEE 802.16j whose objectives are looking into increasing the capacity and coverage of the cellular networks. This book focuses on recent progresses covering the related topics including scenarios of heterogeneous network deployment, interference management in the heterogeneous network deployment, carrier aggregation in a heterogeneous network, cognitive radio cell selection, reselection, and load balancing, mobility and handover management, capacity and coverage optimization for heterogeneous networks, traffic management and congestion control. This book enables readers to better understand the technical details and performance gains that are made possible by this state-of-the-art technology. It contains the information necessary for researchers and engineers wishing to build and deploy highly efficient wireless networks themselves. To enhance this practical understanding, the book is structured to systematically lead the reader through a series of case studies of real-world scenarios.

Key features: Presents this new paradigm in cellular network domain: a heterogeneous network containing network nodes with different characteristics such as transmission

Alshamrani,2010 In the last decade the world has witnessed rapid increasing applications of wireless networks However with the fixed spectrum allocation policy that has been used since the beginning of the spectrum regulation to assign different spectrum bands to different wireless applications it has been observed that most of the allocated spectrum bands are underutilized Therefore if these bands can be opportunistically used by new emerging wireless networks the spectrum scarcity can be resolved Cognitive Radio CR is a revolutionary and promising technology that can identify and then exploit the spectrum opportunities In Cognitive Radio Networks CRNs the spectrum can be utilized by two kinds of users Primary Users PUs having exclusive licenses to use certain spectrum bands for specific wireless applications and Secondary Users SUs having no spectrum licenses but seeking for any spectrum opportunities The SUs can make use of the licensed unused spectrum if they do not make any harmful interference to the PUs However the variation of the spectrum availability over the time and locations due to the coexistence with the PUs and the spread of the spectrum opportunities over wide spectrum bands create a unique trait of the CRNs This key trait poses great challenges in different aspects of the radio resource management in CRNs such as the spectrum sensing spectrum access admission control channel allocation Quality of Service QoS provisioning etc The research results presented in this thesis contribute to realize the concept of the CRNs by developing a practical MAC framework spectrum sensing spectrum allocation user admission control and QoS provisioning for efficient resource management in these promising networks *Annual Review of Communications* ,2005 **EDN** ,2005 **Radio Resource Allocation and Dynamic Spectrum Access** Badr Benmammar,Asma Amraoui,2013-02-05 We are currently witnessing an increase in telecommunications norms and standards given the recent advances in this field The increasing number of normalized standards paves the way for an increase in the range of services available for each consumer Moreover the majority of

available radio frequencies have already been allocated This explains the emergence of cognitive radio CR the sharing of the spectrum between a primary user and a secondary user In this book we will present the state of the art of the different techniques for spectrum access using cooperation and competition to solve the problem of spectrum allocation and ensure better management of radio resources in a radio cognitive context The different aspects of research explored up until now on the applications of multi agent systems MAS in the field of cognitive radio are analyzed in this book The first chapter begins with an insight into wireless networks and mobiles with special focus on the IEEE 802 22 norm which is a norm dedicated to CR Chapter 2 goes into detail about CR which is a technical field at the boundary between telecommunications and Artificial Intelligence AI In Chapter 3 the concept of the agent from AI is expanded to MAS and associated applications Finally Chapter 4 establishes an overview of the use of AI techniques in particular MAS for its allocation of radio resources and dynamic access to the spectrum in CR Contents 1 Wireless and Mobile Networks 2 Cognitive Radio 3 Multi agent Systems 4 Dynamic Spectrum Access About the Authors Badr Benmammar has been Associate Professor at UABT University Abou Bekr Belka d Tlemcen Algeria since 2010 and was a research fellow at CNRS LaBRI Laboratory of the University of Bordeaux 1 until 2007 He is currently carrying out research at the Laboratory of Telecommunications of Tlemcen LTT UABT Algeria His main research activities concern the cognitive radio network Quality of Service on mobile and wireless networks end to end signaling protocols and agent technology His work on Quality of Service has led to many publications in journals and conference proceedings Asma Amraoui is currently a PhD candidate she is preparing a doctoral thesis on a topic of research that explores the use of artificial intelligence techniques in cognitive radio networks She is attached to the Laboratory of Telecommunications of Tlemcen LTT in Algeria
