Bioinformatics and Transcriptomics. Generation of a p53 Interactome Theodore Ngwana,2018-01-08 Scientific Study from the year 2017 in the subject Medicine Biomedical Engineering University of Salford School of Environmental and Life Sciences ELLS course MSc Biomedical Science language English abstract Bioinformatics and computational biology provide us with the tools to collect curate and analyse biological data and have seen increased usage in medicine and other scientific fields over the years One of those areas of medicine where it is widely applied is in cancer research and chemotherapy This report seeks to explore the properties and interactions of one gene p53 which can be key to cancer research This gene encodes the p53 protein which works by stopping cell cycle progression and hence preventing uncontrolled cell proliferation It is also involved in activating the transcription of DNA repair proteins and inducing apoptosis The interactions between p53 and a host of other genes involved in the regulation of transcription was studied with the aid of several databases NCBI Gene MotifMap ChampionChip TRED STRING and a visualization software Cytoscape with which a Boolean model was produced from ten p53 interactions p21 is a very important gene which is regulated by p53 in its transcriptional activation and tumour suppressing function A study of some of the properties of p21 with NCBI Gene and a comparison of the of the number of transcription factors which regulate p21 was done using MofiMap ChampionChip and TRED and found to be higher for ChampionChip which provided a more extensive search than MotifMap Meanwhile TRED produced no results for gene search In conclusion the report demonstrated that the usually very complex network of p53 interactions can be simplified by a Boolean model to show the transcription factors regulated by p53 and the nature of interaction activation or inhibition Understanding these pathways of interactions might be very useful in cancer research and treatment *Genome Research* ,2009 *Clinical Genomics: Practical Applications for Adult Patient Care* Michael F. Murray (Physician),Mark W. Babyatsky,Monica A. Giovanni,Fowzan S. Alkuraya,Douglas R. Stewart,2014 The first book on the clinical application of genetics in primary care medicine Clinical Genomics focuses on the everyday application of genetic assessment and its diagnostic therapeutic and preventive implications in clinical practice Unlike traditional textbooks on medical genetics and dysmorphology this is a clinical reference that covers many of the common diseases seen in everyday medical practice Features endorsed by the American College of Physicians addresses the genetic basis of common chronic diseases not just the classic diseases of dysmorphology
