Clinical Nuclear Medicine Hans-Jürgen Biersack, Leonard M. Freeman, 2008-01-03 The modern era of radionuclide imaging and therapy is well into its seventh decade During this era many national and international textbooks have been published in an attempt to educate not only the practitioners of our medical discipline but also referring physicians and medical students Some of the more recent large multitexts such as those by Ell and Ghambir Sandler et al and Henkin et al provide us with very comprehensive reference sources while some of the smaller texts totally written by two or three individuals e g Mettler Guiberteau and Ziessman O M Ley Thrall have achieved popularity with radiology residents and other physicians in training The concept of Clinical Nuclear Medicine arose 3 years ago from a conversation between the editors who have been close friends for many years We have always felt that our relationship epitomizes one of the major strengths of nuclear medicine which is the very close ties and spirit of educational cooperation that exist between international colleagues We all share the same aim of doing whatever we can to optimize patient care whether it be by introducing new pharmaceuticals and instruments or by developing new techniques or approaches to performing our broad spectrum of clinical procedures Nuclear medicine physicians have almost uniformly been willing to share their expertise at national and international meetings The international nuclear medicine community unlike many other larger specialty areas has remained relatively small It was within this spirit that Clinical Nuclear Medicine was born

Britton, David Collier, Michael Maisey, Q. H. Siraj, 1998-09-04 While nuclear medicine continues to be an important diagnostic technique for many conditions rapid technological developments and shared expertise between radiologists and clinicians give it an increasingly important and much wider role particularly in treatment This changing scene is reflected in the contents of this fully updated third edition of Clinical Nuclear Medicine written by a team of experienced international contributors from the UK USA Canada South Africa Netherlands Belgium and Italy New material includes SPECT image registration new tracer approaches radiopeptides and radio oligonucleotides and new radiopharmaceuticals including untoward reactions to them genital conditions and psychiatric disorders dementia and epilepsy HIV autoimmune disease and immunosuppression and discussion of patient concerns explanations ethical issues staff and public relations      A Clinician's Guide to Nuclear Medicine Andrew Taylor, David M. Das, Noreen Norfaraheen Lee Abdullah, Nuclear Medicine is a fast growing specialty The procedures provide quantitative parameters of organ functions required for modern practice of medicine With the development of new machines and increased application of computer software the procedures are under continuous change Some procedures have become outdated or redundant while new methods have been introduced to enhance the quality of information obtained from a particular application Although there are a few books published abroad to inform doctors and technical staff about the procedures a comprehensive source to give quick information about how different tests are performed particularly the new developments and the expected outcome both in normal and abnormal cases has been a long felt need The physician ordering a Nuclear Medicine test also needs to know what patient preparations are required for optimal results how to satisfy the queries of the patient particularly in respect of radiation exposure which sometimes can be a major concern of the patient This manual has been prepared not only to describe technical details of various procedures that are currently practiced in Nuclear Medicine but also to provide quick information for the doctors and health care personnel on how to inform the patients about the investigation for which they are being referred and how to interpret the results Since there is no such comprehensive book published yet in Asia including South East Asia it is likely to be in great demand in the region All students of master s degree M D DRM DMRIT M Sc Nuclear Medicine and technologists already working in various diagnostic centers will likely buy this book General practitioners and specialists who refer patients for different radio isotope

Nuclear Medicine In Radiological Diagnosis A. Michael Peters, 2003-06-05 Nuclear medicine continues to expand as an important medical imaging specialty both in clinical service and as a tool for non invasive clinical research Nuclear Medicine in Radiological Diagnosis is an attempt to reflect the interdependence of the two disciplines nuclear medicine and radiology To achieve this aim authors have been selected for their dual expertise Of course and as nuclear medicine physicians are quick to point out there is more to the specialty than imaging radionuclide therapy and invitro studies for example so many chapters have been written by dedicated nuclear medicine specialists Other areas many in endocrinology and tumor imaging are almost exclusively the domain of specialist nuclear medicine departments This new clinical reference provides an essential resource for all those working in the field of nuclear medicine and clinical imaging      *Clinical Value of the [nuclear] Medicine Methods* Society of Nuclear Medicine (1963- ), 1979      Manual of Nuclear Medicine Procedures Raman Mistry, 1988-01-01 This manual is designed primarily to be of assistance to trainee nuclear medicine technicians and radiographers It will also be of value to those who are already trained in the safe handling and use of radionuclides for imaging as a rapid reference for routine and non routine nuclear medicine imaging procedures The procedures described were largely developed or modified at the Nuclear Medicine Department Guy s Hospital London with regular updates during the last 10 years The main body of each chapter deals with the technical aspects of radionuclide imaging and each chapter contains a section on the preparation procedure for the relevant radiopharmaceuticals used with brief summaries of the aim of any data analyses using a computer system Although the methods described do not represent the only way to carry out such procedures they have all been evaluated extensively and are known to give satisfactory results I would like to record my thanks to all members of this department who have helped by providing advice comments and data In particular I would like to thank Dr Colin Lazarus for his help with the radiopharmaceuticals sections I am most grateful to Dr Sue Clarke and Dr Ignac Fogelman for checking the manuscripts and finally to Professor Michael Maisey without whose constant

encouragement and support this work would not have been possible
