Becoming an Architect, 1983 **Becoming an Architect** Royal Institute of British Architects, 1979 **On Becoming an Architect** Frank Welch, 2015-04-13 From his

boyhood in Sherman Texas through his education at Texas A M in the 1950s and his first professional ventures Welch s story is a remarkable memoir of how he became one of the Southwest s most important architects Welch s postgraduate years on the Continent and his professional career in Texas are beautifully rendered in a volume richly illustrated with sketches photographs and floor plans of some of the most intriguing architectural gems in the region Becoming an Architect KAY. EVERBLOOM,2025-07-12 You don t need a classroom to learn architecture You need this book Becoming an Architect Book 1 is your first step into the world of architecture written especially for self learners beginners and students who want to study from home No prior knowledge drawing skills or college degree required This book is part of a 9 book series designed to teach architecture in a clear simple and professional way Whether you dream of becoming an architect or just want to understand the buildings around you this coursebook gives you the foundation you need What You ll Learn Inside What architecture really is and how it affects daily life The difference between architecture and construction Types of buildings and what they are designed for Basic elements of a building walls doors floors etc Common building materials and how they re used How to read a floor plan even if you ve never seen one before How to think like a designer not just a student *The Architect* ,1892 *The Architect's Guide* Frederick Rogers (Architect.),1894 **The Architect and Contract Reporter** ,1897 **Becoming an Architect** James Thompson,2016 This dissertation examines the personal narratives of several aspiring architects to investigate the emergence of occupational identities Or how individuals navigate their education to construct a sense of themselves within the architectural community By interpreting the content of these narratives in relation to several relevant strains of contemporary discourse this project exposes and foregrounds features of architectural education rarely considered by educators and scholars in the field Becoming an architect is presented as a holistic experience that requires psychological resilience and meaning making strategies in the face of various challenges that undermine personal investment and wellbeing I argue that adopting such an approach towards architectural education is essential to understanding informing and improving the profession s fundamental yet historically problematic objective of cultural reproduction This project is thus meant to set the groundwork for future studies that focus on how aspiring architects navigate the more human dimensions of their education Twenty five years ago in 1991 Dana Cuff published *Architecture A Story of Practice* in which she asked What is the metamorphic transformation of the layperson into the architect Interviewing members of the architectural community across the United States she crafted a compelling narrative that described architecture s sociocultural milieu Most notably she revealed certain schisms dilemmas and contradictions integral to the architectural community and the architect s role in society For instance individuals are often initially attracted to architecture based on images of professional practice that they later learn are illusory This project revisits many of the themes from Cuff s book although the story is set in a new historical context The central tension in architectural culture that she exposed between ideology and action belief and practice continues to hold Yet a host of structural and cultural changes

within and beyond architecture over the past 25 years necessitates a reexamination of architectural education. While the purview and boundaries of architectural practice have broadened and blurred, the profession is increasingly worried about becoming obsolete. The demand on architecture schools therefore is to continue attracting future practitioners and educate them to practice competently on the one hand and imagine unprecedented modes of practice on the other. In order to enrich and update Cuff's story, this project incorporates new understandings of higher education and professional development that foreground holistic and transformative dimensions. For instance, I apply occupational therapy's notion of occupation as a framework to conceptualize how humans engage in activities, make commitments, and belong to various social communities in various ways that form self-identities and shape their future trajectories. Adopting these perspectives demands a more grounded understanding of architectural education that takes into account how aspiring architects grapple with the occupation of architecture to develop occupational identities. Borrowing theoretical and methodological approaches from research on narrative identity and occupational engagement, I designed the project as a case study of the University of Washington's Masters of Architecture program. In-depth interviews with cross-sectional cohorts of participants including current students, recent graduates, and emerging professionals elicited narratives of their experience before, during, and after architecture school. I then analyzed and assembled these personal narratives, crafting a composite narrative that ultimately evokes architectural education as a process of personal transformation and meaning-making. In and through their narratives, aspiring architects render themselves as navigating and actively contributing to architecture's dualistic nature. This understanding directs our attention to the strategies that students and young professionals use to gain entry into and remain invested in an architectural career path. Through analysis of this composite narrative, I reveal how participants view their education as encompassing more than just learning in formal institutional settings. Moreover, it became clear that forming a coherent and resilient architectural identity required that one's narrative integrates aspects of doing, being, becoming, and belonging, or all four dimensions of occupational engagement. This project continues the tradition of demystifying architectural education by Cuff and other scholars by foregrounding the voices of aspiring architects. It also challenges educators to redefine architectural education more holistically as a set of interrelated commitments, experiences, and relationships. These vectors extend over long periods of one's life, requiring periodic recalibration of architecture as an occupational identity. Such a perspective is not expected to be met with resistance within the architectural community. Indeed, it resonates with many of the field's traditions and stated goals, such as self-education and lifelong learning. Yet it does imply that teaching and mentorship practices, as well as curricular and licensure requirements set by institutional and professional bodies, undergo reevaluation to ensure that architecture's practices align with its beliefs. It also suggests that narratives of aspiring architects, insofar as they reflect the meaning-making and human dimensions of becoming an architect, be taken into account when evaluating architectural education rather than only considering products as demonstrations of acquired skills.
