The Soils of Ireland Rachel Creamer, Lilian O'Sullivan, 2018-03-29 This book provides a comprehensive overview of pedology in Ireland. It describes the main soil types of the country, their functions, ecological use, and the conditions to which they were subjected, associated with management over time. In addition, it presents a complete set of data, pictures, and maps, including benchmark profiles. Factors involved in soil formation are also discussed, making use of new unpublished data and elaborations. The book was produced with the support and sponsorship of Teagasc, The Agriculture and Food Development Authority, Ireland, and the Irish Environmental Protection Agency.

Regenerative Agriculture for Sustainable Food Systems Sandeep Kumar, Ram Swaroop Meena, Parvender Sheoran, Manoj Kumar Jhariya, 2024-10-24 This book aims to present a comprehensive collection of information that combines improved soil and crop productivity, climate-based stress management, enhanced research infrastructure, financial assistance for regenerative technologies, and government subsidies and economic incentives. Considering the importance of soil biodiversity, health, and ecological balance, this book primarily focuses on effective plans and policies for soil management and restoration in agricultural soils. The book covers key areas such as advancing communication strategies to ensure subsidies and incentives for carbon sequestering farm practices and effectively publicizing the benefits of soil carbon health and regenerative practices. It also includes the declaration of rules and regulations to guide policies, programs, and investments in green technologies for soil restoration and ecosystem services, and forming a robust virtual network among farmers, land managers, and their associations to prepare action plans and seek available funding for regenerative farm practices and technologies. Additionally, it promotes research and developmental activities on carbonaceous practices and land use decisions across various agro-ecological regions and soil types. The central theme emphasizes that maintaining the ecological balance of soil, plants, the environment, and health is crucial for a healthier life and serves as a powerful tool in combating climate change, food and nutritional insecurities, and other environmental concerns. This book is suitable for teachers, researchers, scientists, government planners, policymakers, and students of agricultural sciences. It will also interest national and international climate change scientists, extension workers, and capacity builders.

Enhancing Food Production System Resilience for Food Security Facing a Changing Environment Liming Ye, Ping Zhu, 2023-11-28 As the dominant source of the human food supply, the global land system underlies the foundation of the livelihood and wellbeing of humanity on Earth. On the one hand, the growth rate in the land system's productive capacity of food has played a key role in global food provision. Technological breakthroughs in wheat and rice production during the past few decades, for instance, have greatly contributed to the maintenance of this growth rate in many parts of the world. On the other hand, however, the terrestrial food production system is facing increasing challenges from environmental stressors ranging from climate change, air pollution, to land degradation. Whether and how the global land system will support the food security of more than 10 billion people in the 21st century while minimizing its environmental

footprint remains an open question to debate It is inevitable that the global food production system has to be shifted from focusing on production expansion to land system resilience so that the dual goals of sustainable production and environmental friendliness can be simultaneously achieved
